## 2.5 V/3.3 V 16-bit registered transceiver (3-State)

## 74ALVT16543

### FEATURES

- 16-bit universal bus interface
- 5 V I/O Compatible
- 3-State buffers
- Output capability: +64 mA/-32 mA
- TTL input and output switching levels
- Input and output interface capability to systems at 5 V supply
- Bus-hold data inputs eliminate the need for external pull-up resistors to hold unused inputs
- Live insertion/extraction permitted
- Power-up 3-State
- Power-up reset
- No bus current loading when output is tied to 5 V bus
- Latch-up protection exceeds 500mA per JEDEC Std 17
- ESD protection exceeds 2000 V per MIL STD 883 Method 3015 and 200 V per Machine Model

### DESCRIPTION

The 74ALVT16543 is a high-performance BiCMOS product designed for  $V_{CC}$  operation at 2.5 V or 3.3 V with I/O compatibility up to 5 V. The device can be used as two 8-bit transceivers or one 16-bit transceiver.

The 74ALVT16543 contains two sets of eight D-type latches, with separate control pins for each set. Using data flow from A to B as an example, when the A-to-B Enable ( $n\overline{EAB}$ ) input and the A-to-B Latch Enable ( $n\overline{LEAB}$ ) input are LOW, the A-to-B path is transparent.

A subsequent LOW-to-HIGH transition of the  $n\overline{LEAB}$  signal puts the A data into the latches where it is stored and the B outputs no longer change with the A inputs. With  $n\overline{EAB}$  and  $n\overline{OEAB}$  both LOW, the 3-State B output buffers are active and display the data present at the outputs of the A latches.

Control of data flow from B to A is similar, but using the  $n\overline{EBA}$ ,  $n\overline{LEBA}$ , and  $n\overline{OEBA}$  inputs.

Active bus-hold circuitry is provided to hold unused or floating data inputs at a valid logic level.

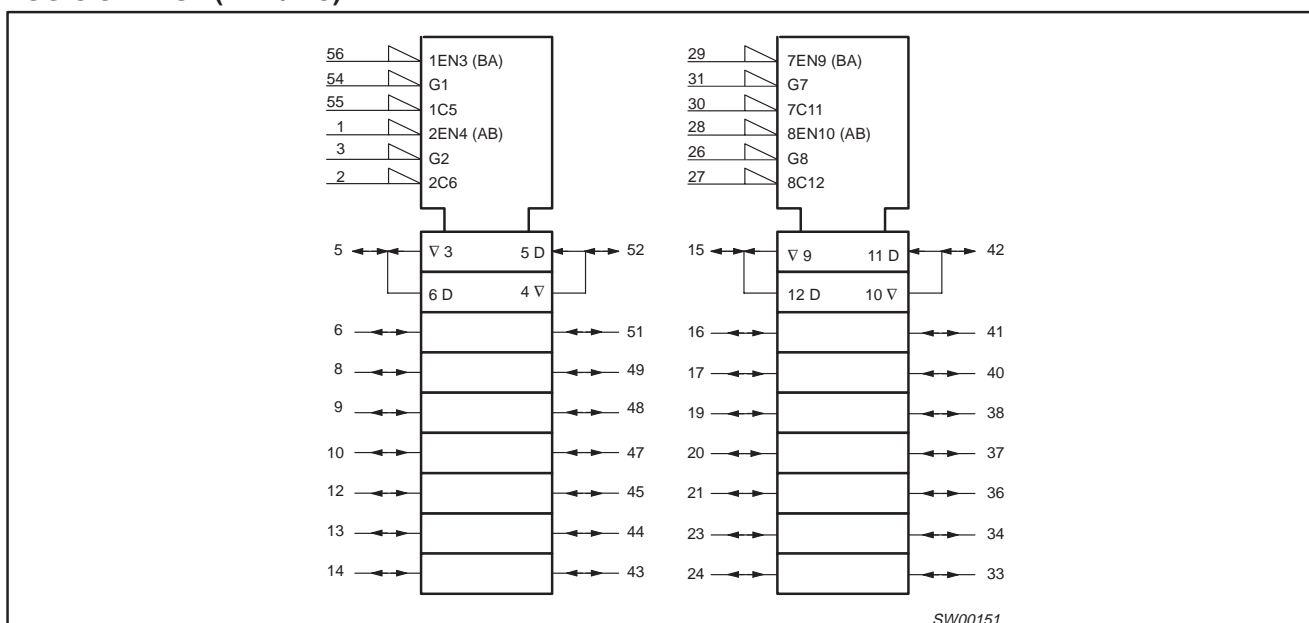

### QUICK REFERENCE DATA

SYMBOL	PARAMETER	CONDITIONS $T_{amb} = 25\text{ }^\circ\text{C}; GND = 0\text{ V}$	TYPICAL		UNIT
			2.5 V	3.3 V	
$t_{PLH}$ $t_{PHL}$	Propagation delay nAx to nBx or nBx to nAx	$C_L = 50\text{ pF}$	1.8 2.7	1.6 1.8	ns
$C_{IN}$	Input capacitance DIR, $\overline{OE}$	$V_I = 0\text{ V or }V_{CC}$	3	3	pF
$C_{I/O}$	I/O pin capacitance	Outputs disabled; $V_{I/O} = 0\text{ V or }V_{CC}$	9	9	pF
$I_{CCZ}$	Total supply current	Outputs disabled	40	70	$\mu\text{A}$

L	L	L	H L	H L	Transparent
L	L	H	X	NC	Hold

H = HIGH voltage level  
h = HIGH voltage level one setup time prior to the LOW-to-HIGH transition of nLE $\bar{X}$  or nE $\bar{X}$  (XX = AB or BA)  
L = LOW voltage level  
l = LOW voltage level one setup time prior to the LOW-to-HIGH transition of nLE $\bar{X}$  or nE $\bar{X}$  (XX = AB or BA)  
X = Don't care  
↑ = LOW-to-HIGH transition of nLE $\bar{X}$  or nE $\bar{X}$  (XX = AB or BA)  
NC= No change  
Z = High-impedance or "off" state

**2.5 V/3.3 V 16-bit registered transceiver (3-State)**
**74ALVT16543**
**ABSOLUTE MAXIMUM RATINGS<sup>1, 2</sup>**

SYMBOL	PARAMETER	CONDITIONS	RATING	UNIT
$V_{CC}$	DC supply voltage		-0.5 to +4.6	V
$I_{IK}$	DC input diode current	$V_I < 0$ V	-50	mA
$V_I$	DC input voltage <sup>3</sup>		-0.5 to +7.0	V
$I_{OK}$	DC output diode current	$V_O < 0$ V	-50	mA
$V_{OUT}$	DC output voltage <sup>3</sup>	Output in Off or HIGH state	-0.5 to +7.0	V
$I_{OUT}$	DC output current	Output in LOW state	128	mA
		Output in HIGH state	-64	
$T_{stg}$	Storage temperature range		-65 to +150	°C

**NOTES:**

- Stresses beyond those listed may cause permanent damage to the device. These are stress ratings only and functional operation of the device at these or any other conditions beyond those indicated under "recommended operating conditions" is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
- The performance capability of a high-performance integrated circuit in conjunction with its thermal environment can create junction temperatures which are detrimental to reliability. The maximum junction temperature of this integrated circuit should not exceed 150 °C.
- The input and output negative voltage ratings may be exceeded if the input and output clamp current ratings are observed.

**RECOMMENDED OPERATING CONDITIONS**

SYMBOL	PARAMETER	2.5 V RANGE LIMITS		3.3 V RANGE LIMITS		UNIT
		MIN	MAX	MIN	MAX	
$V_{CC}$	DC supply voltage	2.3	2.7	3.0	3.6	V

I <sub>HOLD</sub>	Bus Hold current Data inputs <sup>7</sup>	V <sub>CC</sub> = 3 V; V <sub>I</sub> = 0.8 V	75	130	-	μA	
		V <sub>CC</sub> = 3 V; V <sub>I</sub> = 2.0 V	-75	-140	-		
		V <sub>CC</sub> = 0 V to 3.6 V; V <sub>CC</sub> = 3.6 V	± 500	-	-		
I <sub>EX</sub>	Current into an output in the High state when V <sub>O</sub> > V <sub>CC</sub>	V <sub>O</sub> = 5.5 V; V <sub>CC</sub> = 3.0 V	-	50	125	μA	
I <sub>PU/PD</sub>	Power-up/down 3-State output current <sup>3</sup>	V <sub>CC</sub> ≤ 1.2 V; V <sub>O</sub> = 0.5 V to V <sub>CC</sub> ; V <sub>I</sub> = GND or V <sub>CC</sub> ; OE/OE = Don't care	-	40	± 100	μA	
I <sub>CCH</sub>	Quiescent supply current	V <sub>CC</sub> = 3.6 V; Outputs HIGH; V <sub>I</sub> = GND or V <sub>CC</sub> ; I <sub>O</sub> = 0 mA	-	0.07	0.1	mA	
I <sub>CCL</sub>		V <sub>CC</sub> = 3.6 V; Outputs LOW; V <sub>I</sub> = GND or V <sub>CC</sub> ; I <sub>O</sub> = 0 mA	-	3.6	5		
I <sub>CCZ</sub>		V <sub>CC</sub> = 3.6 V; Outputs disabled; V <sub>I</sub> = GND or V <sub>CC</sub> ; I <sub>O</sub> = 0 mA <sup>5</sup>	-	0.07	0.1		
ΔI <sub>CC</sub>	Additional supply current per input pin <sup>2</sup>	V <sub>CC</sub> = 3 V to 3.6 V; One input at V <sub>CC</sub> - 0.6 V; Other inputs at V <sub>CC</sub> or GND	-	0.04	0.4	mA	

**NOTES:**

- All typical values are at V<sub>CC</sub> = 3.3 V and T<sub>amb</sub> = 25 °C.
- This is the increase in supply current for each input at the specified voltage level other than V<sub>CC</sub> or GND.
- This parameter is valid for any V<sub>CC</sub> between 0 V and 1.2 V with a transition time of up to 10 msec. From V<sub>CC</sub> = 1.2 V to V<sub>CC</sub> = 3.3 V ± 0.3 V a transition time of 100 μsec is permitted. This parameter is valid for T<sub>amb</sub> = 25 °C only.
- Unused pins at V<sub>CC</sub> or GND.
- I<sub>CCZ</sub> is measured with outputs pulled up to V<sub>CC</sub> or pulled down to ground.
- For valid test results, data must not be loaded into the flip-flops (or latches) after applying power.
- This is the bus hold overdrive current required to force the input to the opposite logic state.

Data sheet status

Level	Data sheet status [1]	Product status [2] [3]	Definitions
I	Objective data sheet	Development	This data sheet contains data from the objective specification for product development. Philips Semiconductors reserves the right to change the specification in any manner without notice.
II	Preliminary data sheet	Qualification	This data sheet contains data from the preliminary specification. Supplementary data will be published at a later date. Philips Semiconductors reserves the right to change the specification without notice, in order to improve the design and supply the best possible product.
III	Product data sheet	Production	This data sheet contains data from the product specification. Philips Semiconductors reserves the right to make changes at any time in order to improve the design, manufacturing and supply. Relevant changes will be communicated via a Customer Product/Process Change Notification (CPCN).

[1] Please consult the most recently issued data sheet before initiating or completing a design.

[2] The product status of the device(s) described in this data sheet may have changed since this data sheet was published. The latest information is available on the Internet at URL <http://www.semiconductors.philips.com>.

[3] For data sheets describing multiple type numbers, the highest-level product status determines the data sheet status.

Definitions

**Short-form specification** — The data in a short-form specification is extracted from a full data sheet with the same type number and title. For detailed information see the relevant data sheet or data handbook.

**Limiting values definition** — Limiting values given are in accordance with the Absolute Maximum Rating System (IEC 60134). Stress above one or more of the limiting values may cause permanent damage to the device. These are stress ratings only and operation of the device at these or at any other conditions above those given in the Characteristics sections of the specification is not implied. Exposure to limiting values for extended periods may affect device reliability.

**Application information** — Applications that are described herein for any of these products are for illustrative purposes only. Philips Semiconductors make no representation or warranty that such applications will be suitable for the specified use without further testing or modification.

Disclaimers

**Life support** — These products are not designed for use in life support appliances, devices, or systems where malfunction of these products can reasonably be expected to result in personal injury. Philips Semiconductors customers using or selling these products for use in such applications do so at their own risk and agree to fully indemnify Philips Semiconductors for any damages resulting from such application.

**Right to make changes** — Philips Semiconductors reserves the right to make changes in the products—including circuits, standard cells, and/or software—described or contained herein in order to improve design and/or performance. When the product is in full production (status 'Production'), relevant changes will be communicated via a Customer Product/Process Change Notification (CPCN). Philips Semiconductors assumes no responsibility or liability for the use of any of these products, conveys no license or title under any patent, copyright, or mask work right to these products, and makes no representations or warranties that these products are free from patent, copyright, or mask work right infringement, unless otherwise specified.
