3-terminal Filters(SMD) For Wide-band

Conformity to RoHS Directive

MEM Series MEM2012W Type

These SMD Type 3-terminal filters are used for elimination of high frequency noise from signal lines. Due to a higher cutoff frequency than earlier SMD type 3-terminal filters and steep attenuation characteristics, these filters are effective for elimination of a high level of high frequency noise.

FEATURES

- Steeper and wider bandwidth attenuation characteristics than earlier type.
- Used for high cutoff frequency applications.
- Small size (2.0×1.25×2.0mm).
- Entirely monolithic architecture.
- Taped-type packaging, so can be used for automatic mounting.
