Setting Output Voltage

Default output voltage: 0.8375V

The output voltage may be adjusted with a resistor placed between Trim (Pin 1) and (-)Trim (Pin 5).

The formula for calculating the value of this resistor is:

$$R_{Trim} (k) = 1.675 / (V_{out} - 0.8375)$$

Notes:

1. Measured as per recommended system capacitance.
2. di/dt = 10 A/ μs, Vin = Nom, Tc = 25 °C, load change = 0.50 Io max. and vice versa.
3. External fusing is recommended.
4. Measured with external filter.
5. Uses external resistor from trim pin to (-) trim pin.
6. Airflow dependent, 300 LFM minimum required.
7. No capacitor needed for ripple current capability.
8. No capacitor needed for stability.
9. NOTICE: Some models do not support all options. Please contact your local Artesyn Embedded Technologies representative or use the on-line model number search tool at <http://www.artesyn.com/power> to find a suitable alternative.
