Product Bulletin OPB917
 February 2001

Photologic[®] Slotted Optical Switches Type OPB917 Series

Features

- Choice of output configuration
- 24" min 26 AWG wires
- Low power consumption
- 0.86" (21.8 mm) deep slot

Description

The OPB917 consists of an infrared emitting diode and a Photologic[®] photo integrated circuit mounted in an opaque housing with clear windows for dust protection. The extended deep slot allows for a longer reach of the optical path from the mounting plane, .900" (22.86 mm).

Internal apertures are .010" x 0.06" for the Photologic's "S side" and .050" x 0.06" for the LED, "E side". Two logic states and two electrical output types are available. Custom electrical, wire or cabling are available. Contact your local representative or Optek for more information.

Absolute Maximum Ratings (T_A = 25° C unless otherwise noted)

Supply Voltage V _{CC} (Not to exceed 3 sec.)	18 V
Storage and Operating Temperature Range	-40° C to +80° C
Input Diode Power Dissipation	100 mW ⁽¹⁾
Output Photologic [®] Power Dissipation	90 mW ⁽²⁾
Voltage at Output Lead (Open Collector Output)	35 V
Diode Forward D.C. Current	50 mA
Diode Reverse D.C. Voltage	2 V

NOTES:

- (1) Derate linearly 1.67 mW/° C above 25° C.
- (2) Derate linearly 2.67 mW/° C above 70° C.
- (3) Clear dust protection.
- (4) Normal application would be with light source blocked, simulated by I_F = 0 mA.
- (5) All parameters tested using pulse technique.

PRECAUTIONS: Exposure of the plastic body to chlorinated hydrocarbons and ketones such as thread lock and instant adhesive products will degrade the plastic body. Cleaning agents methanol and isopropanol are recommended. Spray or wipe do not submerge.
