## LM4041-N-xx Precision Micropower Shunt Voltage Reference

### 1 Features

- Qualified for Automotive Applications
- SEC-Q100 Qualified With the Following Results:
  - Device Temperature Grade 1:  $-40^{\circ}\text{C}$  to  $+125^{\circ}\text{C}$  Ambient Temperature Range
  - Device Temperature Grade 3:  $-40^{\circ}\text{C}$  to  $+85^{\circ}\text{C}$  Ambient Temperature Range (For SOT-23 Only)
- Available in Standard, AEC Q-100 Grade 1 (Extended Temperature Range), and Grade 3 (Industrial Temperature Range) Qualified Versions (SOT-23 Only)
- Small Packages: SOT-23, TO-92, and SC70
- No Output Capacitor Required
- Tolerates Capacitive Loads
- Reverse Breakdown Voltage Options of 1.225 V and Adjustable
- Output Voltage Tolerance (A grade,  $25^{\circ}\text{C}$ ) =  $\pm 0.1\%$ (Maximum)
- Low Output Noise (10 Hz to 10kHz) =  $20 \mu\text{V}_{\text{rms}}$
- Wide Operating Current Range of 60  $\mu\text{A}$  to 12 mA
- Industrial Temperature Range (LM4041A/B-N, LM4041-N-Q1A/Q1B) of  $-40^{\circ}\text{C}$  to  $+85^{\circ}\text{C}$
- Extended Temperature Range (LM4041C/D/E-N, LM4041-N-Q1C/Q1D/Q1E) of  $-40^{\circ}\text{C}$  to  $+125^{\circ}\text{C}$
- Low Temperature Coefficient of 100 ppm/ $^{\circ}\text{C}$  (Maximum)

### 2 Applications

- Portable, Battery-Powered Equipment
- Data Acquisition Systems
- Instrumentation
- Process Control
- Energy Management
- Automotive
- Precision Audio Components

### 3 Description

Ideal for space-critical applications, the LM4041-N precision voltage reference is available in the subminiature SC70 and SOT-23 surface-mount packages. The advanced design of the LM4041-N eliminates the need for an external stabilizing capacitor while ensuring stability with any capacitive load, thus making the LM4041-N easy to use. Further reducing design effort is the availability of a fixed (1.225 V) and adjustable reverse breakdown voltage. The minimum operating current is 60  $\mu\text{A}$  for the LM4041-N 1.2 and the LM4041-N ADJ. Both versions have a maximum operating current of 12 mA.

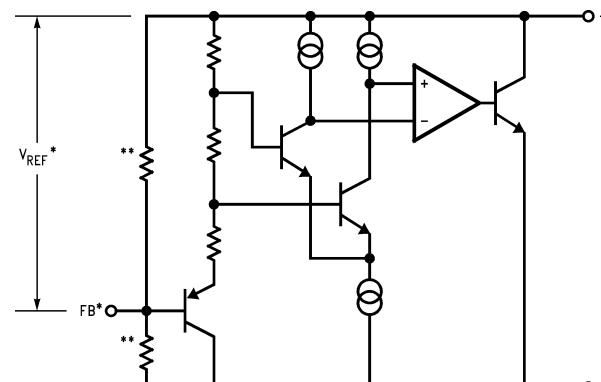

The LM4041-N uses fuse and Zener-zap reverse breakdown or reference voltage trim during wafer sort to ensure that the prime parts have an accuracy of better than  $\pm 0.1\%$  (A grade) at  $25^{\circ}\text{C}$ . Bandgap reference temperature drift curvature correction and low dynamic impedance ensure stable reverse breakdown voltage accuracy over a wide range of operating temperatures and currents.

### Device Information<sup>(1)</sup>

PART NUMBER	PACKAGE	BODY SIZE (NOM)
LM4041-N	SC70 (5)	1.25 mm $\times$ 2.00 mm
	SOT-23 (3)	1.30 mm $\times$ 2.92 mm
	TO-92 (3)	4.30 mm $\times$ 4.30 mm
LM4041-N-Q1	SOT-23 (3)	1.30 mm $\times$ 2.92 mm

(1) For all available packages, see the orderable addendum at the end of the data sheet.

### Block Diagram

An IMPORTANT NOTICE at the end of this data sheet addresses availability, warranty, changes, use in safety-critical applications, intellectual property matters and other important disclaimers. PRODUCTION DATA.

NC	—	1, 4	—	—	No connect

## 6 Specifications

### 6.1 Absolute Maximum Ratings

over operating free-air temperature range (unless otherwise noted)<sup>(1)(2)</sup>

		MIN	MAX	UNIT
Reverse current			20	mA
Forward current			10	mA
Maximum output voltage (LM4041-N ADJ, LM4041-N-Q1 ADJ)			15	V
Power dissipation ( $T_A = 25^\circ\text{C}$ ) <sup>(3)</sup>	DBZ package		306	mW
	LP package		550	mW
	DCK package		241	mW
Lead temperature	DBZ packages	Vapor phase (60 seconds)	215	°C
		Infrared (15 seconds)	220	°C
	LP package	Soldering (10 seconds)	260	°C
Storage temperature, $T_{\text{stg}}$		-65	150	°C

- (1) Stresses beyond those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These are stress ratings only, which do not imply functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Conditions*. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
- (2) If Military/Aerospace specified devices are required, please contact the TI Sales Office/ Distributors for availability and specifications.
- (3) The maximum power dissipation must be derated at elevated temperatures and is dictated by  $T_{\text{Jmax}}$  (maximum junction temperature),  $\theta_{\text{JA}}$  (junction to ambient thermal resistance), and  $T_A$  (ambient temperature). The maximum allowable power dissipation at any temperature is  $PD_{\text{max}} = (T_{\text{Jmax}} - T_A)/R_{\theta_{\text{JA}}}$  or the number given in the *Absolute Maximum Ratings*, whichever is lower. For the LM4041-N,  $T_{\text{Jmax}} = 125^\circ\text{C}$ , and the typical thermal resistance ( $R_{\theta_{\text{JA}}}$ ), when board mounted, is 326°C/W for the SOT-23 package, 415°C/W for the SC70 package and 180°C/W with 0.4-in lead length and 170°C/W with 0.125-in lead length for the TO-92 package.

## 6.2 ESD Ratings

		VALUE	UNIT
$V_{(ESD)}$	Electrostatic discharge	Human-body model (HBM), per ANSI/ESDA/JEDEC JS-001 <sup>(1)(2)</sup>	$\pm 2000$
		Charged-device model (CDM), per JEDEC specification JESD22-C101 <sup>(3)</sup>	$\pm 200$
		Machine model (MM)	$\pm 200$

- (1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.
- (2) The human-body model is a 100-pF capacitor discharged through a 1.5-kΩ resistor into each pin. The machine model is a 200-pF capacitor discharged directly into each pin. All pins are rated at 2 kV for human-body model, but the feedback pin which is rated at 1 kV.
- (3) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process. Manufacturing with less than 250-V CDM is possible with the necessary precautions.

## 6.3 Recommended Operating Conditions

See <sup>(1)</sup>

		MIN	NOM	MAX	UNIT
Temperature		$T_{min}$	$T_A$	$T_{max}$	°C
Industrial temperature		-40	$T_A$	85	°C
Extended temperature		-40	$T_A$	125	°C
Reverse current	LM4041-N 1.2, LM4041-N-Q1 1.2	60		1200	μA
	LM4041-N ADJ, LM4041-N-Q1 ADJ	60		1200	μA
Output voltage	LM4041-N ADJ, LM4041-N-Q1 ADJ	1.24		10	V

- (1) *Absolute Maximum Ratings* indicate limits beyond which damage to the device may occur. *Recommended Operating Conditions* indicate conditions for which the device is functional, but do not ensure specific performance limits. For ensured specifications and test conditions, see the *Electrical Characteristics*. The ensured specifications apply only for the test conditions listed. Some performance characteristics may degrade when the device is not operated under the listed test conditions.

## 6.4 Thermal Information

THERMAL METRIC <sup>(1)</sup>		LM4041-N		LM4041-N, LM4041-N-Q1	UNIT
		SC70	TO-92	SOT-23	
		5 PINS	3 PINS	3 PINS	
$R_{\theta JA}$	Junction-to-ambient thermal resistance	265.3	161.5	291.9	°C/W
$R_{\theta JC(top)}$	Junction-to-case (top) thermal resistance	93.1	84.5	114.3	°C/W
$R_{\theta JB}$	Junction-to-board thermal resistance	46.7	—	62.3	°C/W
$\Psi_{JT}$	Junction-to-top characterization parameter	2.2	28.4	7.4	°C/W
$\Psi_{JB}$	Junction-to-board characterization parameter	45.9	140.6	61	°C/W
$R_{\theta JC(bot)}$	Junction-to-case (bottom) thermal resistance	—	—	—	°C/W

- (1) For more information about traditional and new thermal metrics, see the *Semiconductor and IC Package Thermal Metrics* application report, [SPRA953](#).

## LM4041-N, LM4041-N-Q1

SNOS641G – OCTOBER 1999 – REVISED JANUARY 2016

[www.ti.com](http://www.ti.com)

### 6.5 LM4041-N-xx 1.2 Electrical Characteristics (Industrial Temperature Range)

All limits  $T_A = T_J = 25^\circ\text{C}$  for the LM4041xAIM3, LM4041xBIM3, LM4041AIZ, LM4041BIZ and LM4041BIM7 devices, unless otherwise specified. The grades A and B designate initial reverse breakdown voltage tolerances of  $\pm 0.1\%$  and  $\pm 0.2\%$ , respectively.

PARAMETER		TEST CONDITIONS		MIN <sup>(1)</sup>	TYP <sup>(2)</sup>	MAX <sup>(1)</sup>	UNIT		
$V_R$	Reverse breakdown voltage	$I_R = 100 \mu\text{A}$		1.225		V			
	Reverse breakdown voltage tolerance <sup>(3)</sup>	$I_R = 100 \mu\text{A}$	LM4041AIM3, LM4041QAIM3 LM4041AIM3, LM4041AIZ		$\pm 1.2$		mV		
			LM4041BIM3, LM4041QBIM3 LM4041BIZ, LM4041BIM7		$\pm 2.4$				
	$T_A = T_J = T_{\text{MIN}} \text{ to } T_{\text{MAX}}$		LM4041AIM3, LM4041QAIM3 LM4041AIM3, LM4041AIZ		$\pm 9.2$				
			LM4041BIM3, LM4041QBIM3 LM4041BIZ, LM4041BIM7		$\pm 10.4$				
$I_{R\text{MIN}}$	Minimum operating current	$T_A = T_J = 25^\circ\text{C}$		45	60	$\mu\text{A}$			
		$T_A = T_J = T_{\text{MIN}} \text{ to } T_{\text{MAX}}$		65					
$\Delta V_R / \Delta T$	Average reverse breakdown voltage temperature Coefficient <sup>(3)</sup>	$I_R = 10 \text{ mA}$		$\pm 20$		$\text{ppm}/^\circ\text{C}$			
		$I_R = 1 \text{ mA}$	$T_A = T_J = 25^\circ\text{C}$		$\pm 15$				
			$T_A = T_J = T_{\text{MIN}} \text{ to } T_{\text{MAX}}$		$\pm 100$				
		$I_R = 100 \mu\text{A}$		$\pm 15$					
$\Delta V_R / \Delta I_R$	Reverse breakdown voltage change with operating current change <sup>(4)</sup>	$I_{R\text{MIN}} \leq I_R \leq 1 \text{ mA}$	$T_A = T_J = 25^\circ\text{C}$		0.7	1.5	mV		
			$T_A = T_J = T_{\text{MIN}} \text{ to } T_{\text{MAX}}$		2				
		$1 \text{ mA} \leq I_R \leq 12 \text{ mA}$	$T_A = T_J = 25^\circ\text{C}$		4	6			
			$T_A = T_J = T_{\text{MIN}} \text{ to } T_{\text{MAX}}$		8				
$Z_R$	Reverse dynamic impedance	$I_R = 1 \text{ mA}, f = 120 \text{ Hz}, I_{AC} = 0.1 I_R$		0.5		1.5	$\Omega$		
$e_N$	Wideband noise	$I_R = 100 \mu\text{A}$ $10 \text{ Hz} \leq f \leq 10 \text{ kHz}$		20		$\mu\text{V}_{\text{rms}}$			
$\Delta V_R$	Reverse breakdown voltage long-term stability	$t = 1000 \text{ hrs}$ $T = 25^\circ\text{C} \pm 0.1^\circ\text{C}$ $I_R = 100 \mu\text{A}$		120		$\text{ppm}$			
$V_{\text{HYST}}$	Thermal hysteresis <sup>(5)</sup>	$\Delta T = -40^\circ\text{C} \text{ to } +125^\circ\text{C}$		0.08%					

(1) Limits are 100% production tested at  $25^\circ\text{C}$ . Limits over temperature are ensured through correlation using Statistical Quality Control (SQC) methods. The limits are used to calculate AOQL.

(2) Typicals are at  $T_J = 25^\circ\text{C}$  and represent most likely parametric norm.

(3) The overtemperature limit for Reverse Breakdown Voltage Tolerance is defined as the room temperature Reverse Breakdown Voltage Tolerance  $\pm [(\Delta V_R / \Delta T)(\max \Delta T)(V_R)]$ . Where,  $\Delta V_R / \Delta T$  is the  $V_R$  temperature coefficient,  $\max \Delta T$  is the maximum difference in temperature from the reference point of  $25^\circ\text{C}$  to  $T_{\text{MAX}}$  or  $T_{\text{MIN}}$ , and  $V_R$  is the reverse breakdown voltage. The total over-temperature tolerance for the different grades in the industrial temperature range where  $\max \Delta T = 65^\circ\text{C}$  is shown below:

A-grade:  $\pm 0.75\% = \pm 0.1\% \pm 100 \text{ ppm}/^\circ\text{C} \times 65^\circ\text{C}$

B-grade:  $\pm 0.85\% = \pm 0.2\% \pm 100 \text{ ppm}/^\circ\text{C} \times 65^\circ\text{C}$

C-grade:  $\pm 1.15\% = \pm 0.5\% \pm 100 \text{ ppm}/^\circ\text{C} \times 65^\circ\text{C}$

D-grade:  $\pm 1.98\% = \pm 1.0\% \pm 150 \text{ ppm}/^\circ\text{C} \times 65^\circ\text{C}$

E-grade:  $\pm 2.98\% = \pm 2.0\% \pm 150 \text{ ppm}/^\circ\text{C} \times 65^\circ\text{C}$

The total over-temperature tolerance for the different grades in the extended temperature range where  $\max \Delta T = 100^\circ\text{C}$  is shown below:

B-grade:  $\pm 1.2\% = \pm 0.2\% \pm 100 \text{ ppm}/^\circ\text{C} \times 100^\circ\text{C}$

C-grade:  $\pm 1.5\% = \pm 0.5\% \pm 100 \text{ ppm}/^\circ\text{C} \times 100^\circ\text{C}$

D-grade:  $\pm 2.5\% = \pm 1.0\% \pm 150 \text{ ppm}/^\circ\text{C} \times 100^\circ\text{C}$

E-grade:  $\pm 4.5\% = \pm 2.0\% \pm 150 \text{ ppm}/^\circ\text{C} \times 100^\circ\text{C}$

Therefore, as an example, the A-grade LM4041-N 1.2 has an over-temperature Reverse Breakdown Voltage tolerance of  $\pm 1.2 \text{ V} \times 0.75\% = \pm 0.92 \text{ mV}$ .

(4) Load regulation is measured on pulse basis from no load to the specified load current. Output changes due to die temperature change must be taken into account separately.

(5) Thermal hysteresis is defined as the difference in voltage measured at  $+25^\circ\text{C}$  after cycling to temperature  $-40^\circ\text{C}$  and the  $+25^\circ\text{C}$  measurement after cycling to temperature  $+125^\circ\text{C}$ .

## 6.6 LM4041-N-xx 1.2 Electrical Characteristics (Industrial Temperature Range)

All limits  $T_A = T_J = 25^\circ\text{C}$ , unless otherwise specified. The grades C, D, and E designate initial reverse breakdown voltage tolerances of  $\pm 0.5\%$ ,  $\pm 1.0\%$ , and  $\pm 2.0\%$ , respectively.

PARAMETER	TEST CONDITIONS			MIN <sup>(1)</sup>	TYP <sup>(2)</sup>	MAX <sup>(1)</sup>	UNIT

$\Delta V_R/\Delta T$	$V_R$ Temperature coefficient <sup>(3)</sup>	$I_R = 10 \text{ mA}$				$\pm 20$	ppm/ $^\circ\text{C}$
		$I_R = 1 \text{ mA}$	$T_A = T_J = 25^\circ\text{C}$			$\pm 15$	
				LM4041CIM3, LM4041QCIM3, LM4041CIZ, LM4041CIM7		$\pm 100$	
			$T_A = T_J = T_{\text{MIN}} \text{ to } T_{\text{MAX}}$	LM4041DIM3, LM4041QDIM3, LM4041DIZ, LM4041DIM7, LM4041EIM3, LM4041QEIM3, LM4041EIZ, LM4041EIM7		$\pm 150$	
		$I_R = 100 \mu\text{A}$				$\pm 15$	

(1) Limits are 100% production tested at  $25^\circ\text{C}$ . Limits over temperature are ensured through correlation using Statistical Quality Control (SQC) methods. The limits are used to calculate AOQL.

(2) Typicals are at  $T_J = 25^\circ\text{C}$  and represent most likely parametric norm.

(3) The overtemperature limit for reverse breakdown voltage tolerance is defined as the room temperature reverse breakdown voltage tolerance  $\pm [(\Delta V_R/\Delta T)(\max \Delta T)(V_R)]$ . Where,  $\Delta V_R/\Delta T$  is the  $V_R$  temperature coefficient,  $\max \Delta T$  is the maximum difference in temperature from the reference point of  $25^\circ\text{C}$  to  $T_{\text{MAX}}$  or  $T_{\text{MIN}}$ , and  $V_R$  is the reverse breakdown voltage. The total over-temperature tolerance for the different grades in the industrial temperature range where  $\max \Delta T = 65^\circ\text{C}$  is shown below:

A-grade:  $\pm 0.75\% = \pm 0.1\% \pm 100 \text{ ppm}/^\circ\text{C} \times 65^\circ\text{C}$

B-grade:  $\pm 0.85\% = \pm 0.2\% \pm 100 \text{ ppm}/^\circ\text{C} \times 65^\circ\text{C}$

C-grade:  $\pm 1.15\% = \pm 0.5\% \pm 100 \text{ ppm}/^\circ\text{C} \times 65^\circ\text{C}$

D-grade:  $\pm 1.98\% = \pm 1.0\% \pm 150 \text{ ppm}/^\circ\text{C} \times 65^\circ\text{C}$

E-grade:  $\pm 2.98\% = \pm 2.0\% \pm 150 \text{ ppm}/^\circ\text{C} \times 65^\circ\text{C}$

The total over-temperature tolerance for the different grades in the extended temperature range where  $\max \Delta T = 100^\circ\text{C}$  is shown below:

B-grade:  $\pm 1.2\% = \pm 0.2\% \pm 100 \text{ ppm}/^\circ\text{C} \times 100^\circ\text{C}$

C-grade:  $\pm 1.5\% = \pm 0.5\% \pm 100 \text{ ppm}/^\circ\text{C} \times 100^\circ\text{C}$

D-grade:  $\pm 2.5\% = \pm 1.0\% \pm 150 \text{ ppm}/^\circ\text{C} \times 100^\circ\text{C}$

E-grade:  $\pm 4.5\% = \pm 2.0\% \pm 150 \text{ ppm}/^\circ\text{C} \times 100^\circ\text{C}$

Therefore, as an example, the A-grade LM4041-N 1.2 has an over-temperature reverse breakdown voltage tolerance of  $\pm 1.2 \text{ V} \times 0.75\% = \pm 9.2 \text{ mV}$ .

## LM4041-N, LM4041-N-Q1

SNOS641G – OCTOBER 1999 – REVISED JANUARY 2016

[www.ti.com](http://www.ti.com)

### LM4041-N-xx 1.2 Electrical Characteristics (Industrial Temperature Range) (continued)

All limits  $T_A = T_J = 25^\circ\text{C}$ , unless otherwise specified. The grades C, D, and E designate initial reverse breakdown voltage tolerances of  $\pm 0.5\%$ ,  $\pm 1.0\%$ , and  $\pm 2.0\%$ , respectively.

		$I_R = 1 \text{ mA}$	$T_A = T_J = 25^\circ\text{C}$	LM4041EEM3, LM4041QEEM3		$\pm 20$			
				LM4041CEM3, LM4041QCEM3		$\pm 15$			
			$T_A = T_J = T_{\text{MIN}} \text{ to } T_{\text{MAX}}$	LM4041DEM3, LM4041QDEM3 LM4041EEM3, LM4041QEEM3		$\pm 100$			
				LM4041CEM3, LM4041QCEM3		$\pm 150$			
$\Delta V_R/\Delta T$	VR temperature coefficient <sup>(3)</sup>	LM4041EEM3, LM4041QEEM3				$\pm 15$		ppm/ $^\circ\text{C}$	

(1) Limits are 100% production tested at  $25^\circ\text{C}$ . Limits over temperature are ensured through correlation using Statistical Quality Control (SQC) methods. The limits are used to calculate AOQL.

(2) Typicals are at  $T_J = 25^\circ\text{C}$  and represent most likely parametric norm.

(3) The overtemperature limit for reverse breakdown voltage tolerance is defined as the room temperature reverse breakdown voltage tolerance  $\pm [(\Delta V_R/\Delta T)(\max \Delta T)(V_R)]$ . Where,  $\Delta V_R/\Delta T$  is the  $V_R$  temperature coefficient,  $\max \Delta T$  is the maximum difference in temperature from the reference point of  $25^\circ\text{C}$  to  $T_{\text{MAX}}$  or  $T_{\text{MIN}}$ , and  $V_R$  is the reverse breakdown voltage. The total over-temperature tolerance for the different grades in the industrial temperature range where  $\max \Delta T = 65^\circ\text{C}$  is shown below:

A-grade:  $\pm 0.75\% = \pm 0.1\% \pm 100 \text{ ppm}/^\circ\text{C} \times 65^\circ\text{C}$

B-grade:  $\pm 0.85\% = \pm 0.2\% \pm 100 \text{ ppm}/^\circ\text{C} \times 65^\circ\text{C}$

C-grade:  $\pm 1.15\% = \pm 0.5\% \pm 100 \text{ ppm}/^\circ\text{C} \times 65^\circ\text{C}$

D-grade:  $\pm 1.98\% = \pm 1.0\% \pm 150 \text{ ppm}/^\circ\text{C} \times 65^\circ\text{C}$

E-grade:  $\pm 2.98\% = \pm 2.0\% \pm 150 \text{ ppm}/^\circ\text{C} \times 65^\circ\text{C}$

The total over-temperature tolerance for the different grades in the extended temperature range where  $\max \Delta T = 100^\circ\text{C}$  is shown below:

B-grade:  $\pm 1.2\% = \pm 0.2\% \pm 100 \text{ ppm}/^\circ\text{C} \times 100^\circ\text{C}$

C-grade:  $\pm 1.5\% = \pm 0.5\% \pm 100 \text{ ppm}/^\circ\text{C} \times 100^\circ\text{C}$

D-grade:  $\pm 2.5\% = \pm 1.0\% \pm 150 \text{ ppm}/^\circ\text{C} \times 100^\circ\text{C}$

E-grade:  $\pm 4.5\% = \pm 2.0\% \pm 150 \text{ ppm}/^\circ\text{C} \times 100^\circ\text{C}$

Therefore, as an example, the A-grade LM4041-N 1.2 has an over-temperature reverse breakdown voltage tolerance of  $\pm 1.2 \text{ V} \times 0.75\% = \pm 9.2 \text{ mV}$ .

## 8 Detailed Description

### 8.1 Overview

The LM4041 is a precision micro-power shunt voltage reference available in both a fixed and output voltage and adjustable output voltage options. The part has three different packages available to meet small footprint requirements. It is also available in five different tolerance grades.

### 8.2 Functional Block Diagram

\*LM4041-N ADJ only

\*\*LM4041-N 1.2 only

### 8.3 Feature Description

The LM4041 is effectively a precision Zener diode. The part requires a small quiescent current for regulation, and regulates the output voltage by shunting more or less current to ground, depending on input voltage and load. The only external component requirement is a resistor between the cathode and the input voltage to set the input current. An external capacitor can be used on the input or output, but is not required.

**LM4041-N, LM4041-N-Q1**

SNOS641G – OCTOBER 1999 – REVISED JANUARY 2016

[www.ti.com](http://www.ti.com)**8.4 Device Functional Modes**

The LM4041 has fixed output voltage options as well as adjustable output voltage options. The fixed output parts can only be used in closed-loop operation, as the feedback is internal. The adjustable option parts are most commonly operated in closed-loop mode, where the feedback node is tied to the output voltage through a resistor divider. The output voltage will remain as long as  $I_R$  is between  $I_{RMIN}$  and  $I_{RMAX}$ ; see [LM4041-N-xx 1.2 Electrical Characteristics \(Industrial Temperature Range\)](#). This part can also be used in open-loop mode to act as a comparator, driving the feedback node from another voltage source.

## 9 Application and Implementation

### NOTE

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

### 9.1 Application Information

The LM4041-N is a precision micro-power curvature-corrected bandgap shunt voltage reference. For space-critical applications, the LM4041-N is available in the sub-miniature SOT-23 and SC70 surface-mount package. The LM4041-N has been designed for stable operation without the need of an external capacitor connected between the + pin and the – pin. If, however, a bypass capacitor is used, the LM4041-N remains stable. Design effort is further reduced with the choice of either a fixed 1.2 V or an adjustable reverse breakdown voltage. The minimum operating current is 60  $\mu$ A for the LM4041-N 1.2 V and the LM4041-N ADJ. Both versions have a maximum operating current of 12 mA.

LM4041-Ns using the SOT-23 package have pin 3 connected as the (–) output through the die attach interface of the package. Therefore, pin 3 of the LM4041-N 1.2 must be left floating or connected to pin 2 and pin 3 of the LM4041-N ADJ pinout.

The LM4041-N devices using the SC70 package have pin 2 connected as the (–) output through the die attach interface of the package. Therefore, the LM4041-N pin 2 of the LM4041-N 1.2 must be left floating or connected to pin 1, and the pin 2 of the LM4041-N ADJ is the (–) output.

The typical thermal hysteresis specification is defined as the change in 25°C voltage measured after thermal cycling. The device is thermal cycled to temperature –40°C and then measured at +25°C. Next the device is thermal cycled to temperature 125°C and again measured at 25°C. The resulting  $V_{OUT}$  delta shift between the 25°C measurements is thermal hysteresis. Thermal hysteresis is common in precision references and is induced by thermal-mechanical package stress. Changes in environmental storage temperature, operating temperature and board mounting temperature are all factors that can contribute to thermal hysteresis.

In a conventional shunt regulator application (Figure 17), an external series resistor ( $R_S$ ) is connected between the supply voltage and the LM4041-N.  $R_S$  determines the current that flows through the load ( $I_L$ ) and the LM4041-N ( $I_Q$ ). Because load current and supply voltage may vary,  $R_S$  must be small enough to supply at least the minimum acceptable  $I_Q$  to the LM4041-N even when the supply voltage is at its minimum and the load current is at its maximum value. When the supply voltage is at its maximum and  $I_L$  is at its minimum,  $R_S$  must be large enough so that the current flowing through the LM4041-N is less than 12 mA.

$R_S$  must be selected based on the supply voltage, ( $V_S$ ), the desired load and operating current, ( $I_L$  and  $I_Q$ ), and the reverse breakdown voltage of the LM4041-N,  $V_R$ .

$$R_S = \frac{V_S - V_R}{I_L + I_Q} \quad (1)$$

The output voltage of the LM4041-N SDJ can be adjusted to any value in the range of 1.24 V through 10 V. It is a function of the internal reference voltage ( $V_{REF}$ ) and the ratio of the external feedback resistors as shown in Figure 19 . The output voltage is found using Equation 2.

$$V_O = V_{REF}[(R2/R1) + 1]$$

where

- $V_O$  is the output voltage. (2)

The actual value of the internal  $V_{REF}$  is a function of  $V_O$ . The corrected  $V_{REF}$  is determined by Equation 3.

$$V_{REF} = \Delta V_O (\Delta V_{REF}/\Delta V_O) + V_Y$$

where

- $V_Y = 1.240$  V
- and  $\Delta V_O = (V_O - V_Y)$  (3)

## LM4041-N, LM4041-N-Q1

SNOS641G –OCTOBER 1999–REVISED JANUARY 2016

[www.ti.com](http://www.ti.com)

## Application Information (continued)

$\Delta V_{REF}/\Delta V_O$  is found in the electrical characteristics tables in the *Specifications* and is typically  $-1.55 \text{ mV/V}$ . You can get a more accurate indication of the output voltage by replacing the value of  $V_{REF}$  in [Equation 2](#) with the value found using [Equation 3](#).

### NOTE

The actual output voltage can deviate from that predicted using the typical value of  $\Delta V_{REF} / \Delta V_O$  in [Equation 3](#). For C-grade parts, the worst-case  $\Delta V_{REF} / \Delta V_O$  is  $-2.5 \text{ mV/V}$ . For D-grade parts, the worst-case  $\Delta V_{REF} / \Delta V_O$  is  $-3.0 \text{ mV/V}$ .

## 9.2 Typical Applications

### 9.2.1 Shunt Regulator

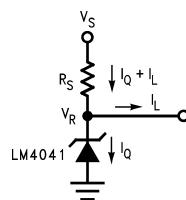

Figure 17. Shunt Regulator

#### 9.2.1.1 Design Requirements

$$V_{IN} > V_{OUT}$$

Select  $R_S$  with [Equation 4](#).

$$I_{RMIN} < I_R < I_{RMAX} = 15 \text{ mA} \quad (4)$$

See the electrical characteristics tables in the *Specifications* for minimum operating current for each voltage option and grade.

#### 9.2.1.2 Detailed Design Procedure

The resistor  $R_S$  must be selected such that current  $I_R$  remains in the operational region of the part for the entire  $V_{IN}$  range and load current range. At its maximum, the  $R_S$  must be small enough for  $I_R$  to remain above  $I_{RMN}$ . The other extreme is when  $V_{IN}$  at its maximum and the load at its minimum; the  $R_S$  must be large enough to maintain  $I_R < I_{RMAX}$ . If unsure, try using  $0.1 \text{ mA} \leq I_R \leq 1 \text{ mA}$  as starting point. Just remember the value of  $I_R$  varies with input and voltage load.

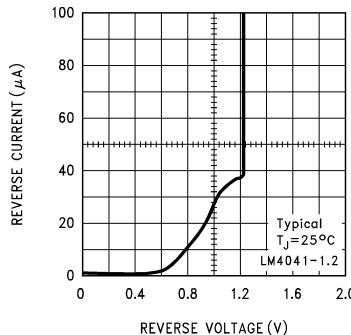

Use equations [Equation 5](#) and [Equation 6](#) to set  $R_S$  between  $R_{S\_MIN}$  and  $R_{S\_MAX}$ .

$$R_{S\_MIN} = \frac{V_{IN\_MAX} - V_{OUT}}{I_{LOAD\_MIN} + I_{R\_MAX}} \quad (5)$$

$$R_{S\_MAX} = \frac{V_{IN\_MIN} - V_{OUT}}{I_{LOAD\_MAX} + I_{R\_MIN}} \quad (6)$$

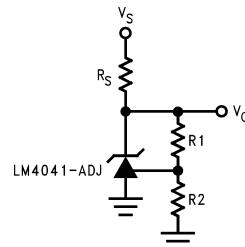

## Typical Applications (continued)

### 9.2.1.3 Application Curve

**Figure 18. Reverse Characteristics and Minimum Operating Current**

### 9.2.2 Adjustable Shunt Regulator

$$V_O = V_{REF}[(R_2/R_1) + 1]$$

**Figure 19. Adjustable Shunt Regulator**

#### 9.2.2.1 Design Requirements

$$V_{IN} > V_{OUT}$$

$$V_{OUT} = 2.5 \text{ V}$$

Select  $R_S$  with [Equation 7](#).

$$I_{RMIN} < I_R < I_{RMAX}$$

where

- $I_{RMAX} = 15 \text{ mA}$  (7)

See the electrical characteristics tables in the [Specifications](#) for minimum operating current for each voltage option and grade.

#### 9.2.2.2 Detail Design Procedure

Select a value of  $R_S$  based on the same method shown in [Detailed Design Procedure](#).

Set feedback resistors  $R_1$  and  $R_2$  for a resistor divider on the equation shown in [Application Information](#) that is reproduced here as [Equation 8](#).

$$V_{OUT} + V_{REF} \times ((R_2/R_1)+1) \quad (8)$$

So, for a 2.5-V reference, of  $V_{REF}$  is 1.24 V, then  $R_2/R_1 = 1.01$ . Select  $R_2 = 1.01 \text{ k}\Omega$  and  $R_1 = 1.0 \text{ k}\Omega$ .

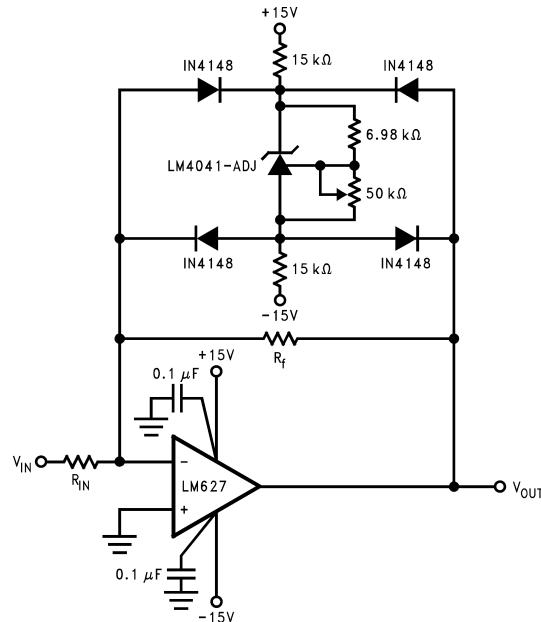

## LM4041-N, LM4041-N-Q1

SNOS641G –OCTOBER 1999–REVISED JANUARY 2016

[www.ti.com](http://www.ti.com)

### Typical Applications (continued)

#### 9.2.3 Bounded Amplifier

Bounded amplifier reduces saturation-induced delays and can prevent succeeding stage damage. Nominal clamping voltage is  $\pm V_O$  (the reverse breakdown voltage of the LM4041-N) +2 diode  $V_F$ .

**Figure 20. Bounded Amplifier**

##### 9.2.3.1 Design Requirements

Design an amplifier with output clamped at  $\pm 11.5$  V.

##### 9.2.3.2 Detail Design Procedure

With amplifier rails of  $\pm 15$  V, the output can be bound to  $\pm 11.5$  V with the LM4041 adjustable set for 10 V and two nominal diode voltage drops of 0.7 V.

$$V_{OUTBOUND} = 2 \times V_{FWD} + V_Z \quad (9)$$

$$V_{OUTBOUND} = 1.4 \text{ V} + 10 \text{ V} \quad (10)$$

Select  $R_S = 15 \text{ k}\Omega$  to keep  $L_R$  low. Calculate  $L_R$  to confirm  $R_S$  selection.

Use Equation 11, but in this case, take the negative supply into account.

$$I_R = (V_{IN} - V_{OUT}) / R \quad (11)$$

$$I_R = (V_{IN+} - V_{IN} - V_{OUT}) / R = (30 \text{ V} - 10 \text{ V}) / (R_{S1} + R_{S2}) = 20 \text{ V} / 30 \text{ k}\Omega = 0.667 \text{ mA} \quad (12)$$

This is an acceptable value for  $I_R$  that does not draw excessive current, but prevents the part from being starved for current.

## Typical Applications (continued)

### 9.2.3.3 Application Curve

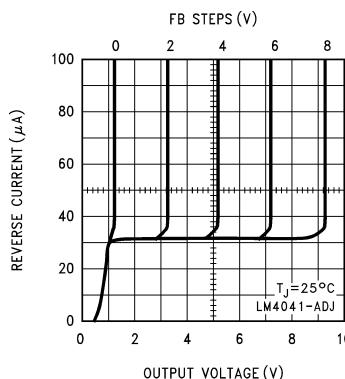

Figure 21. Reverse Characteristics

### 9.2.4 Voltage Level Detector

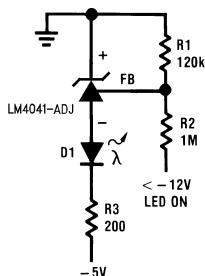

Figure 22. Voltage Level Detector

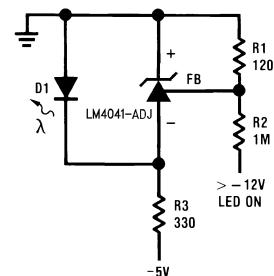

Figure 23. Voltage Level Detector

#### 9.2.4.1 Design Procedure

Turn on an LED when voltage is above or below  $-12\text{ V}$ .

#### 9.2.4.2 Detail Design Procedure

Use the LM4041 in an open-loop configuration, where the feedback node is tied to a voltage divider driven by the input signal. The voltage divider is set such that when the input signal is at  $-12\text{ V}$ , the feedback node is  $-1.24\text{ V}$ . The high gain of the LM4041 will enable it to act like a comparator.

### 9.2.5 Precision Current Sink and Source

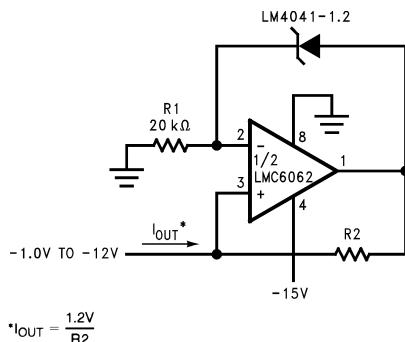

Figure 24. Precision 1- $\mu\text{A}$  to 1-mA Current Sink

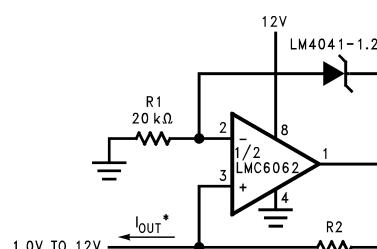

Figure 25. Precision 1- $\mu\text{A}$  to 1-mA Current Sources

## LM4041-N, LM4041-N-Q1

SNOS641G –OCTOBER 1999–REVISED JANUARY 2016

[www.ti.com](http://www.ti.com)

### 9.2.5.1 Design Requirements

Create precision 1-mA current sink and 1-mA current source.

### 9.2.5.2 Detailed Design Procedure

Set R1 such that the current through the shunt reference,  $I_R$ , is greater than  $I_{RMIN}$ .

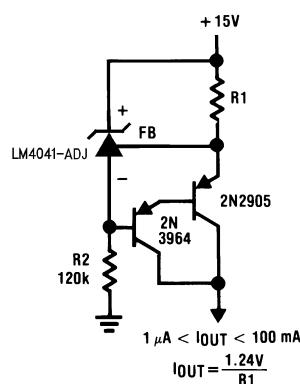

$$I_{OUT} = V_{OUT} / R_2$$

where

- $V_{OUT}$  is the voltage drop across the shunt reference

In this case,  $I_{OUT} = 1.2 / R_2$ .

## 9.2.6 100-mA Current Source

\*D1 can be any LED,  $V_F = 1.5 \text{ V}$  to  $2.2 \text{ V}$  at  $3 \text{ mA}$ . D1 may act as an indicator. D1 will be on if  $I_{THRESHOLD}$  falls below the threshold current, except with  $I = 0$ .

**Figure 26. Current Source**

### 9.2.6.1 Design Requirements

Create 100-mA current source.

### 9.2.6.2 Detailed Design Procedure

$$I_{OUT} = V_{OUT} / R_1$$

where

- $V_{OUT}$  is the voltage drop across the shunt reference.

In this case,  $I_{OUT} = 1.24 / R_1$ .

### 9.2.7 LM4041 in Clamp Circuits

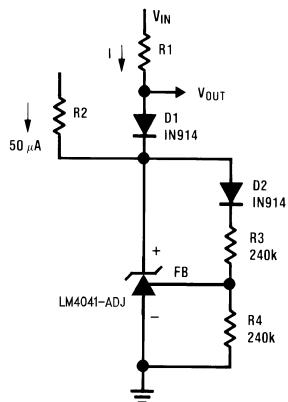

Figure 27. Fast Positive Clamp 2.4 V +  $V_{D1}$

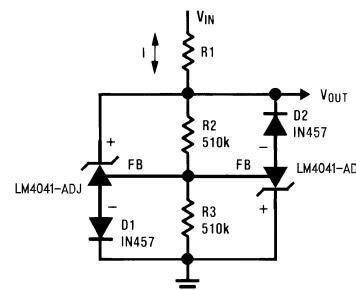

Figure 28. Bidirectional Clamp  $\pm 2.4$  V

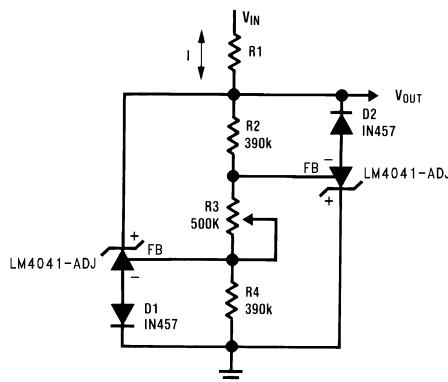

Figure 29. Bidirectional Adjustable Clamp  $\pm 18$  V to  $\pm 2.4$  V

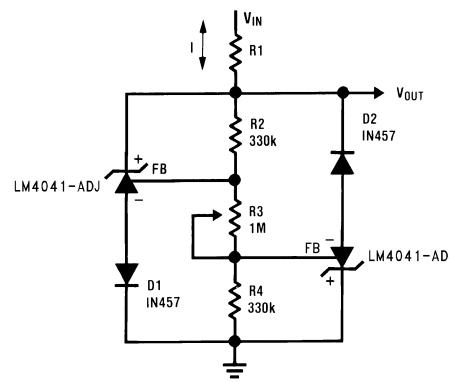

Figure 30. Bidirectional Adjustable Clamp  $\pm 2.4$  V to  $\pm 6$  V

#### 9.2.7.1 Design Requirements

Create adjustable clamping circuits using the LM4041.

#### 9.2.7.2 Detailed Design Procedure

Use the LM4041 in open-loop, as a 1.24-V diode that can be on or off based on the voltage at the feedback. See Figure 27 through Figure 30 for examples.

## LM4041-N, LM4041-N-Q1

SNOS641G –OCTOBER 1999–REVISED JANUARY 2016

[www.ti.com](http://www.ti.com)

### 9.2.8 Floating Current Detector

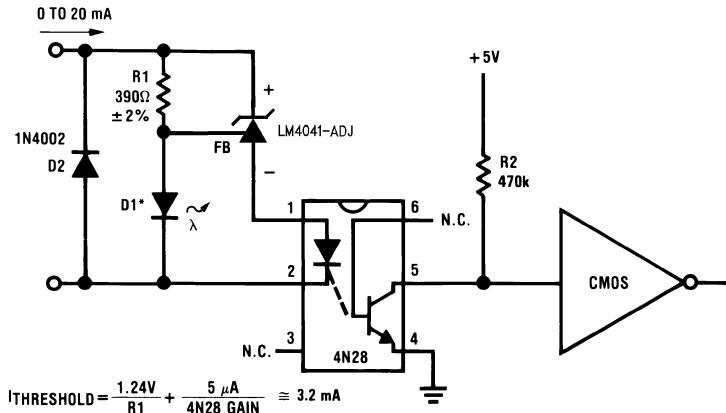

Figure 31. Simple Floating Current Detector

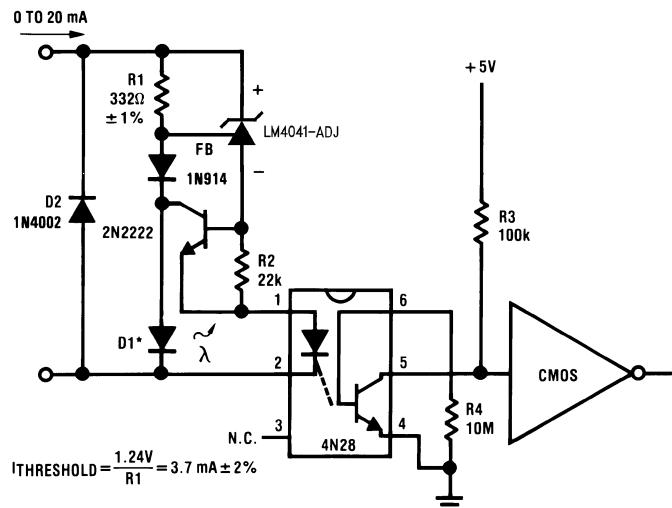

Figure 32. Precision Floating Current Detector

#### 9.2.8.1 Design Requirement

Create a floating current detector using the LM4041.

#### 9.2.8.2 Detailed Design Procedure

Use the LM4041 as a voltage dependent diode, which turns on and off based on the voltage drop across R1. See [Figure 31](#) and [Figure 32](#) for examples.

## 10 Power Supply Recommendations

While a bypass capacitor is not required on the input voltage line, TI recommends reducing noise on the input which could affect the output. A 0.1- $\mu$ F ceramic capacitor or larger is recommended.

## 11 Layout

### 11.1 Layout Guidelines

Place external components as close to the device as possible. Place  $R_S$  close the cathode, as well as the input bypass capacitor, if used. Keep feedback resistor close the device whenever possible.

### 11.2 Layout Example

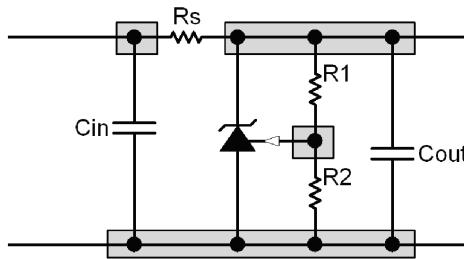

Figure 33. Recommended Layout

(1) The marketing status values are defined as follows:

**ACTIVE:** Product device recommended for new designs.

**LIFEBUY:** TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

**NRND:** Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

**PREVIEW:** Device has been announced but is not in production. Samples may or may not be available.

**OBSOLETE:** TI has discontinued the production of the device.

(2) Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check <http://www.ti.com/productcontent> for the latest availability information and additional product content details.

**TBD:** The Pb-Free/Green conversion plan has not been defined.

**Pb-Free (RoHS):** TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.

**Pb-Free (RoHS Exempt):** This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.

**Green (RoHS & no Sb/Br):** TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "-" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead/Ball Finish - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead/Ball Finish values may wrap to two lines if the finish value exceeds the maximum column width.

**Important Information and Disclaimer:** The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

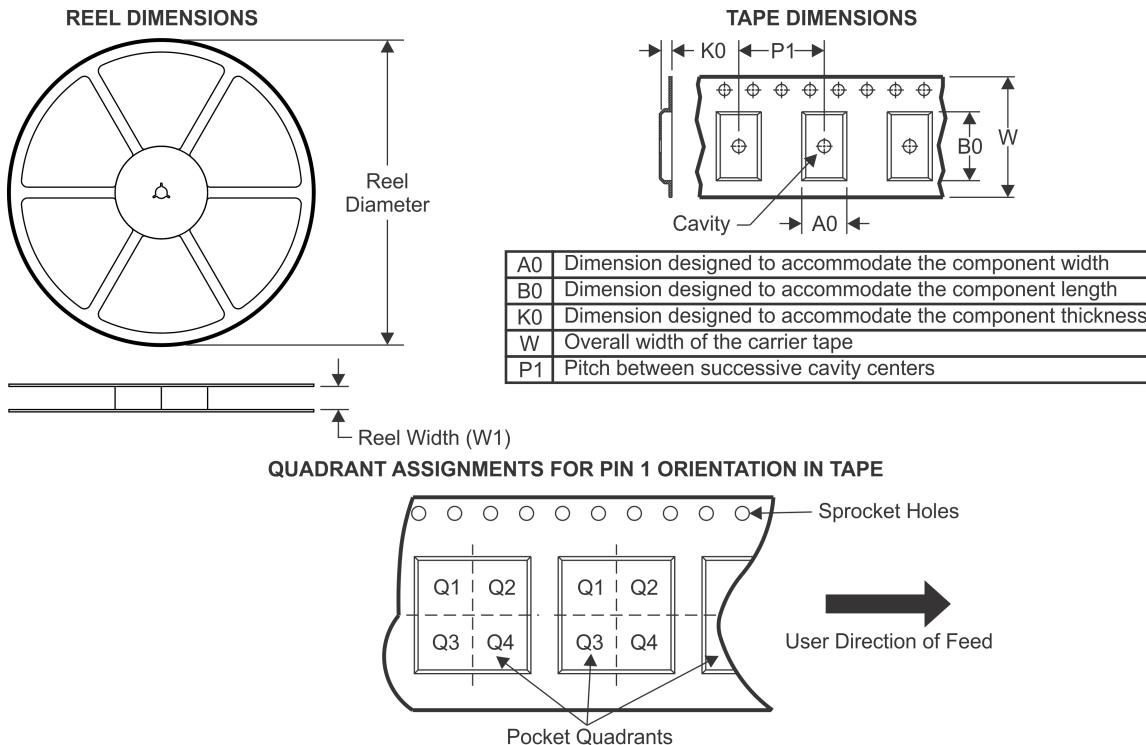

**OTHER QUALIFIED VERSIONS OF LM4041-N, LM4041-N-Q1 :**

- Catalog: [LM4041-N](#)
- Automotive: [LM4041-N-Q1](#)

NOTE: Qualified Version Definitions:

- Catalog - TI's standard catalog product
- Automotive - Q100 devices qualified for high-reliability automotive applications targeting zero defects

## MECHANICAL DATA

DCK (R-PDSO-G5)

PLASTIC SMALL-OUTLINE PACKAGE

4093553-3/G 01/2007

- NOTES:
- All linear dimensions are in millimeters.
  - This drawing is subject to change without notice.
  - Body dimensions do not include mold flash or protrusion. Mold flash and protrusion shall not exceed 0.15 per side.
  - Falls within JEDEC MO-203 variation AA.

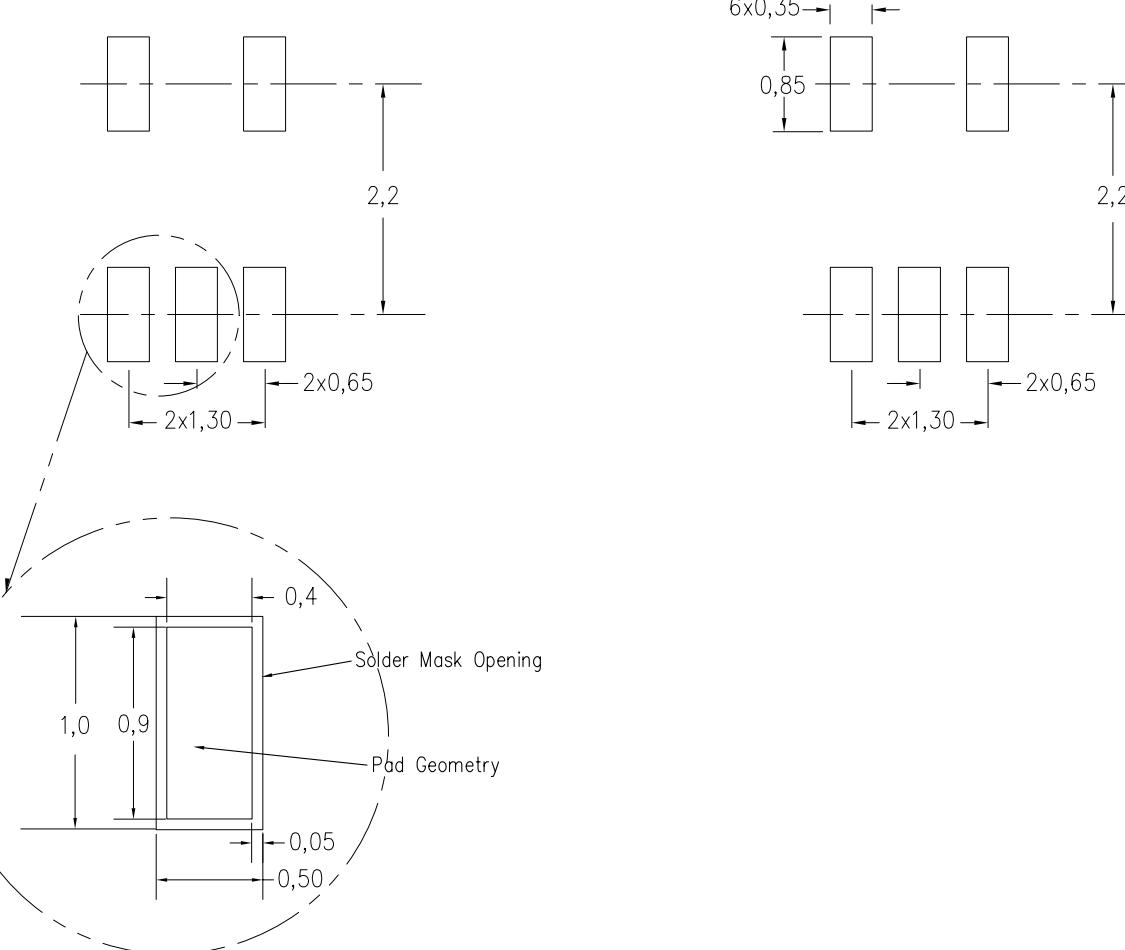

## LAND PATTERN DATA

DCK (R-PDSO-G5)

PLASTIC SMALL OUTLINE

Example Board Layout

Stencil Openings  
Based on a stencil thickness  
of .127mm (.005inch).

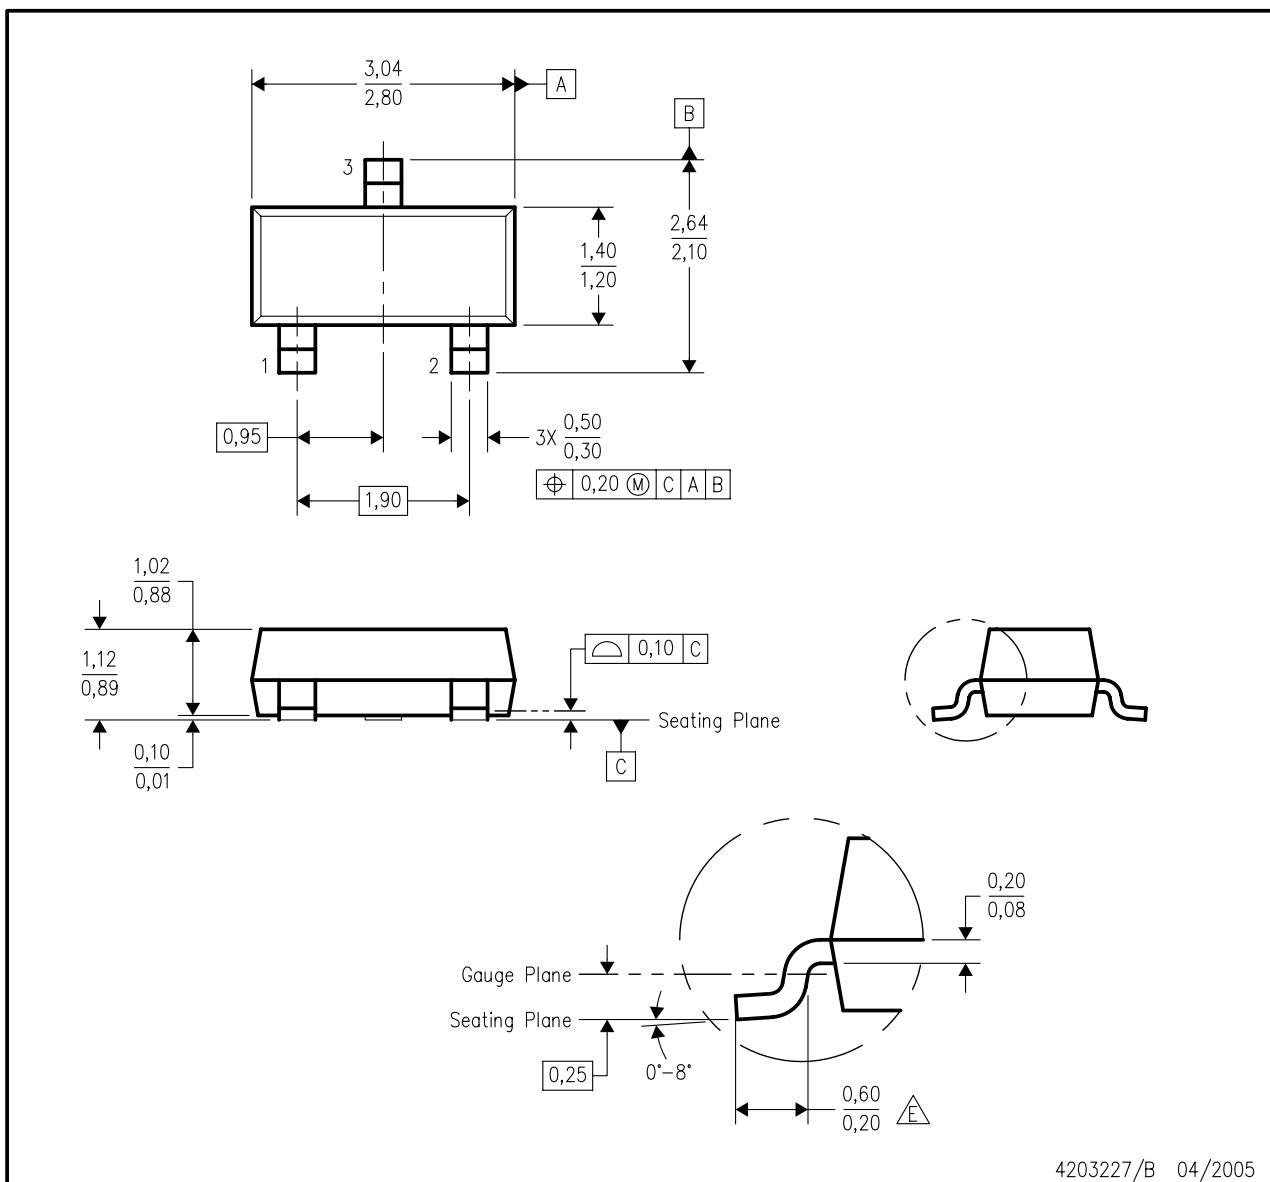

4210356-2/C 07/11

- NOTES:
- All linear dimensions are in millimeters.
  - This drawing is subject to change without notice.
  - Customers should place a note on the circuit board fabrication drawing not to alter the center solder mask defined pad.
  - Publication IPC-7351 is recommended for alternate designs.
  - Laser cutting apertures with trapezoidal walls and also rounding corners will offer better paste release. Customers should contact their board assembly site for stencil design recommendations. Example stencil design based on a 50% volumetric metal load solder paste. Refer to IPC-7525 for other stencil recommendations.

## MECHANICAL DATA

DBZ (R-PDSO-G3)

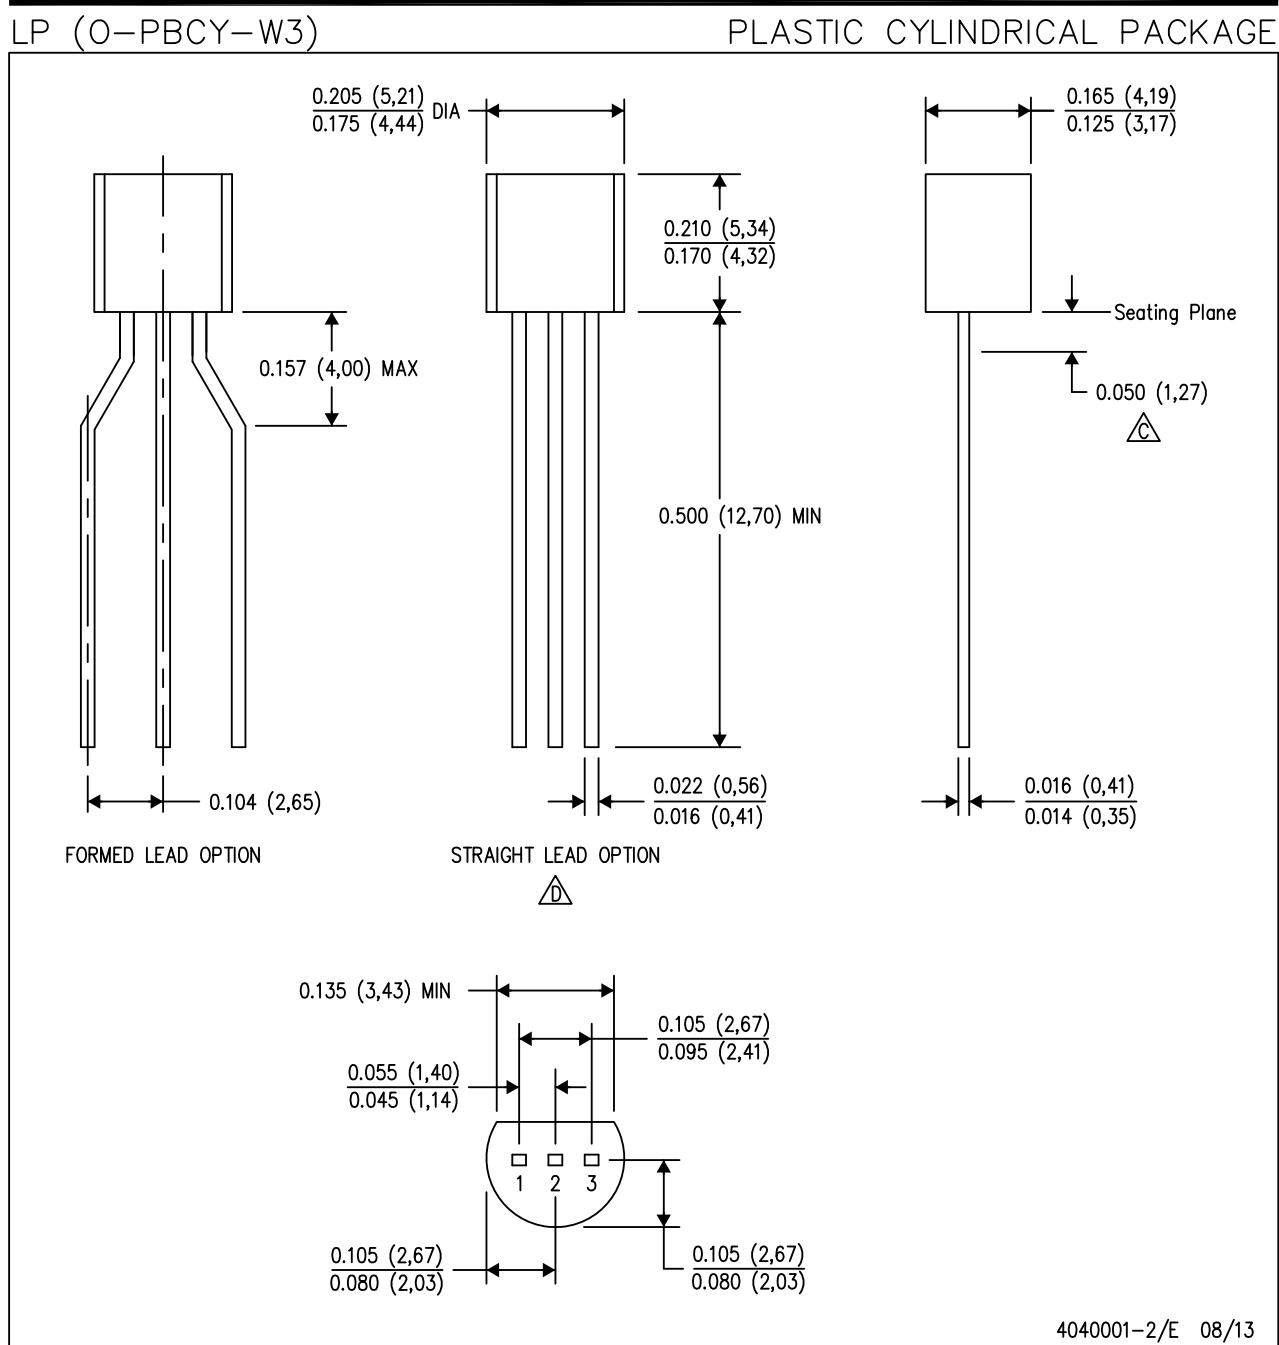

PLASTIC SMALL-OUTLINE

4203227/B 04/2005

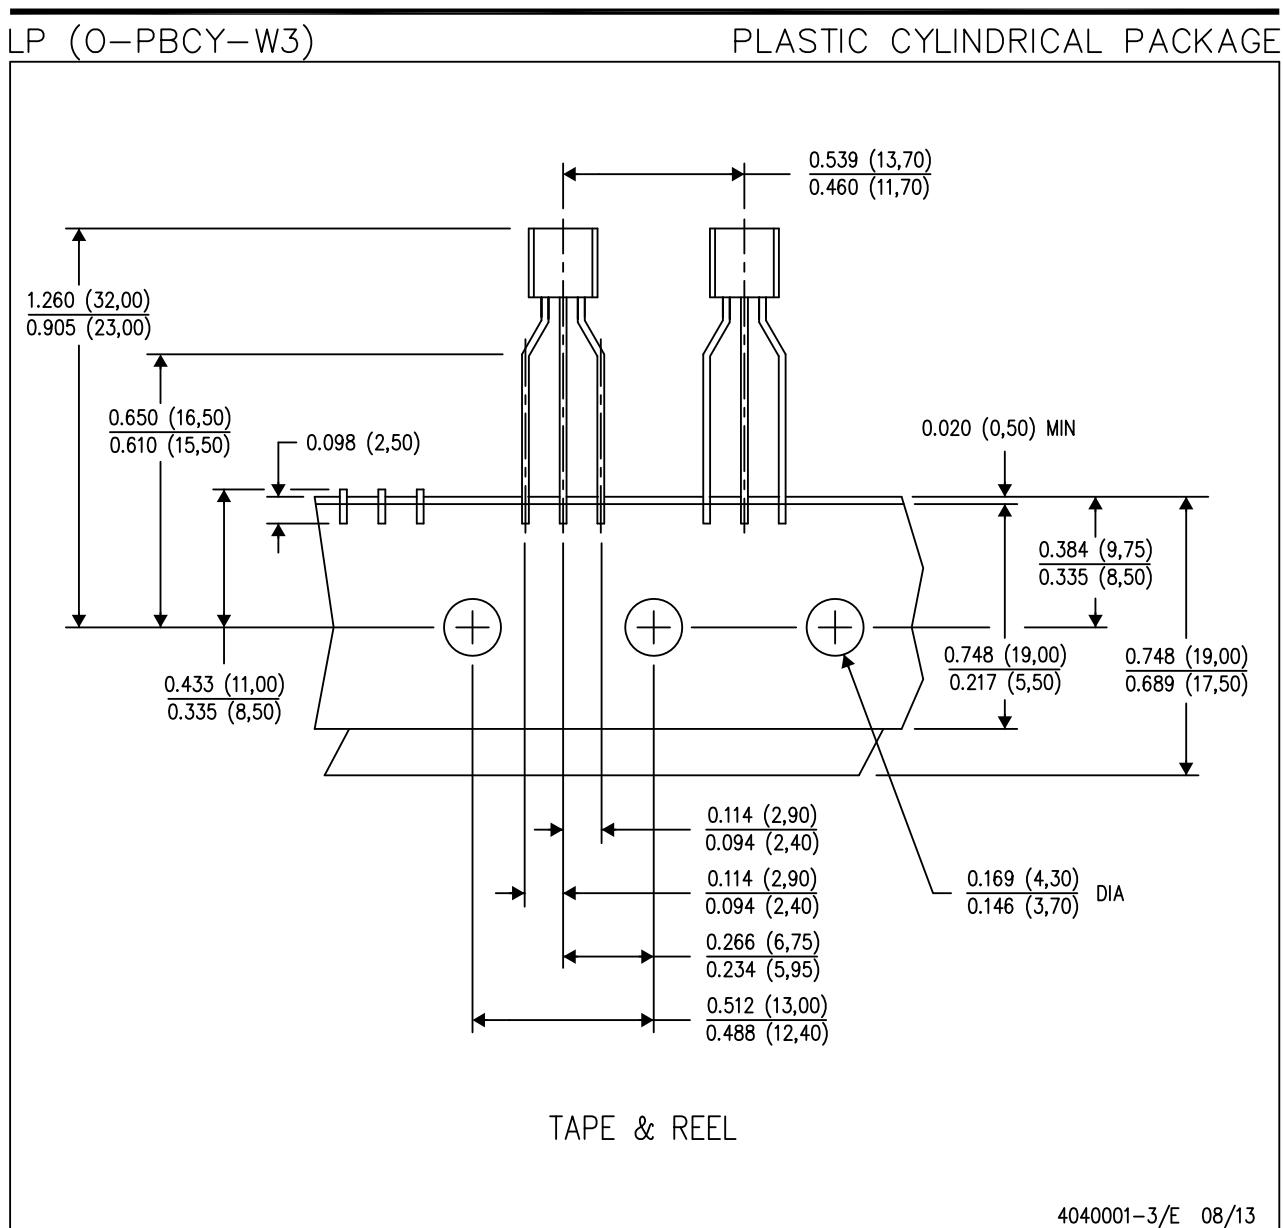

- NOTES:
- All linear dimensions are in millimeters. Dimensioning and tolerancing per ASME Y14.5M-1994.
  - This drawing is subject to change without notice.
  - Lead dimensions are inclusive of plating.
  - Body dimensions are exclusive of mold flash and protrusion. Mold flash and protrusion not to exceed 0.25 per side.
- Falls within JEDEC TO-236 variation AB, except minimum foot length.

## MECHANICAL DATA

- NOTES:**
- A. All linear dimensions are in inches (millimeters).
  - B. This drawing is subject to change without notice.
  - C. Lead dimensions are not controlled within this area.
  - D. Falls within JEDEC TO-226 Variation AA (TO-226 replaces TO-92).
  - E. Shipping Method:  
Straight lead option available in bulk pack only.  
Formed lead option available in tape & reel or ammo pack.  
Specific products can be offered in limited combinations of shipping mediums and lead options.  
Consult product folder for more information on available options.

## MECHANICAL DATA

**NOTES:**

- A. All linear dimensions are in inches (millimeters).
- B. This drawing is subject to change without notice.
- C. Tape and Reel information for the Formed Lead Option package.

## **IMPORTANT NOTICE**

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, enhancements, improvements and other changes to its semiconductor products and services per JESD46, latest issue, and to discontinue any product or service per JESD48, latest issue. Buyers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All semiconductor products (also referred to herein as "components") are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its components to the specifications applicable at the time of sale, in accordance with the warranty in TI's terms and conditions of sale of semiconductor products. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by applicable law, testing of all parameters of each component is not necessarily performed.

TI assumes no liability for applications assistance or the design of Buyers' products. Buyers are responsible for their products and applications using TI components. To minimize the risks associated with Buyers' products and applications, Buyers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right relating to any combination, machine, or process in which TI components or services are used. Information published by TI regarding third-party products or services does not constitute a license to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of significant portions of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI components or services with statements different from or beyond the parameters stated by TI for that component or service voids all express and any implied warranties for the associated TI component or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

Buyer acknowledges and agrees that it is solely responsible for compliance with all legal, regulatory and safety-related requirements concerning its products, and any use of TI components in its applications, notwithstanding any applications-related information or support that may be provided by TI. Buyer represents and agrees that it has all the necessary expertise to create and implement safeguards which anticipate dangerous consequences of failures, monitor failures and their consequences, lessen the likelihood of failures that might cause harm and take appropriate remedial actions. Buyer will fully indemnify TI and its representatives against any damages arising out of the use of any TI components in safety-critical applications.

In some cases, TI components may be promoted specifically to facilitate safety-related applications. With such components, TI's goal is to help enable customers to design and create their own end-product solutions that meet applicable functional safety standards and requirements. Nonetheless, such components are subject to these terms.

No TI components are authorized for use in FDA Class III (or similar life-critical medical equipment) unless authorized officers of the parties have executed a special agreement specifically governing such use.

Only those TI components which TI has specifically designated as military grade or "enhanced plastic" are designed and intended for use in military/aerospace applications or environments. Buyer acknowledges and agrees that any military or aerospace use of TI components which have **not** been so designated is solely at the Buyer's risk, and that Buyer is solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI has specifically designated certain components as meeting ISO/TS16949 requirements, mainly for automotive use. In any case of use of non-designated products, TI will not be responsible for any failure to meet ISO/TS16949.
