FDC653N N-Channel Enhancement Mode Field Effect Transistor

General Description

This N-Channel enhancement mode power field effect transistors is produced using Fairchild's proprietary, high cell density, DMOS technology. This very high density process is tailored to minimize on-state resistance. These devices are particularly suited for low voltage applications in notebook computers, portable phones, PCMCIA cards, and other battery powered circuits where fast switching, and low in-line power loss are needed in a very small outline surface mount package.

Features

- 5 A, 30 V. $R_{DS(ON)} = 0.035 \Omega @ V_{GS} = 10 \text{ V}$
 $R_{DS(ON)} = 0.055 \Omega @ V_{GS} = 4.5 \text{ V}$.
- Proprietary SuperSOT™-6 package design using copper lead frame for superior thermal and electrical capabilities.
- High density cell design for extremely low $R_{DS(ON)}$.
- Exceptional on-resistance and maximum DC current capability.

Absolute Maximum Ratings $T_A = 25^\circ\text{C}$ unless otherwise note

Notes:

1. $R_{\theta JA}$ is the sum of the junction-to-case and case-to-ambient thermal resistance where the case thermal reference is defined as the solder mounting surface of the drain pins. $R_{\theta JC}$ is guaranteed by design while $R_{\theta CA}$ is determined by the user's board design.

b. 156°C/W when mounted on a minimum pad of 2oz Cu in FR-4 board.

2. Pulse Test: Pulse Width $\leq 300\ \mu\text{s}$, Duty Cycle $\leq 2.0\%$.
