Output Voltage Adjustment

The ultra-wide output voltage trim range offers major advantages to users who select the SIL30C-12SADJ. It is no longer necessary to purchase a variety of modules in order to cover different output voltages. The output voltage can be trimmed in a range of 0.9 Vdc to 5.0 Vdc. When the SIL30C-12SADJ converter leaves the factory the output has been adjusted to the default voltage of 0.9 V.

Notes:

- 1. Uses external resistor from TRIM to output ground. See Application Note 132 for details.
- 2. Measured with external filter. See Application Note 132 for details.
- 3. di/dt = 10 A/ μ s, Vin = Nom, Tc = 25 °C, load change = 0.5 lo max to 0.75 lo max and 0.75 lo max to 0.5 lo max.
- External input fusing is recommended.
- Power up is the time from application of dc input to POWER GOOD high. Remote ON/OFF asserted high to POWER GOOD high.
- 6. Signal line assumed <3 m.
- 7. This product is only for inclusion by professional installers within other equipment and must not be operated as a stand alone product.
- 8. See Application Note 132 for operation above 50 $^{\circ}\text{C}.$
- 9. See Application Note 132 for ripple current requirements.
- The standard unit with the suffix '-V' is for vertical mounting. To order a unit with horizontal mounting, please add the suffix '-H' to the model number, e.g. SIL30C-12SADJ-HJ.
- 11. This model has a wide trim output of between 0.9 Vdc to 5 Vdc. An external resistor adjusts the output voltage.
- 12. NOTICE: Some models do not support all options. Please contact your local Artesyn representative or use the on-line model number search tool at http://www.artesyn.com/power to find a suitable alternative.
