**DS1080L**

## **Spread-Spectrum Crystal Multiplier**

### **General Description**

The DS1080L is a low-jitter, crystal-based clock generator with an integrated phase-locked loop (PLL) to generate spread-spectrum clock outputs from 16MHz to 134MHz. The device is pin-programmable to select the clock multiplier rate as well as the dither magnitude. The DS1080L has a spread-spectrum disable mode and a power-down mode to conserve power.

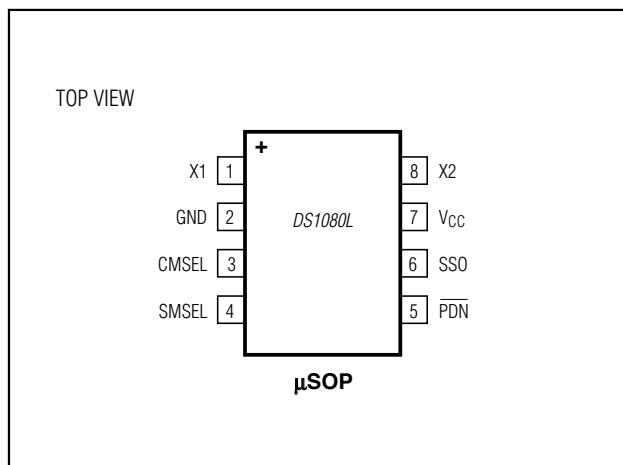

### **Applications**

Automotive  
Cable Modems  
Cell Phones  
Computer Peripherals  
Copiers  
Infotainment  
PCs  
Printers

### **Features**

- ◆ Generates Spread-Spectrum Clocks from 16MHz to 134MHz
- ◆ Selectable Clock Multiplier Rates of 1x, 2x, and 4x
- ◆ Center Spread-Spectrum Dithering
- ◆ Selectable Spread-Spectrum Modulation Magnitudes of  $\pm 0.5\%$ ,  $\pm 1.0\%$ , and  $\pm 1.5\%$
- ◆ Spread-Spectrum Disable Mode
- ◆ Low Cycle-to-Cycle Jitter
- ◆ Power-Down Mode with High-Impedance Output
- ◆ Low Power Consumption
- ◆ 3.0V to 3.6V Single-Supply Operation
- ◆ -40°C to +125°C Temperature Operation
- ◆ Small 8-Lead  $\mu$ SOP Package

### **Pin Configuration**

### **Ordering Information**

| PART         | TEMP RANGE      | PIN-PACKAGE |
|--------------|-----------------|-------------|
| DS1080LU+    | -40°C to +125°C | 8 $\mu$ SOP |
| DS1080LU/V+  | -40°C to +125°C | 8 $\mu$ SOP |
| DS1080LU/V+T | -40°C to +125°C | 8 $\mu$ SOP |
| DS1080LU+T   | -40°C to +125°C | 8 $\mu$ SOP |

+Denotes a lead(Pb)-free/RoHS-compliant package.  
/V denotes an automotive qualified part.

T = Tape and reel.

# DS1080L

## Spread-Spectrum Crystal Multiplier

### ABSOLUTE MAXIMUM RATINGS

Voltage on V<sub>CC</sub> Relative to GND ..... -0.3V to +4.3V  
 Voltage on Any Lead Relative to GND ..... -0.3V to (V<sub>CC</sub> + 0.3V), not to exceed +4.3V  
 Continuous Power Dissipation (T<sub>A</sub> = +70°C) .....  $\mu$ SOP (derate 4.5mW/°C above +70°C) ..... 362mW

Operating Temperature Range ..... -40°C to +125°C  
 Storage Temperature Range ..... -55°C to +125°C  
 Lead Temperature (soldering, 10s) ..... +300°C  
 Soldering Temperature (reflow) ..... +260°C

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

### RECOMMENDED OPERATING CONDITIONS

(T<sub>A</sub> = -40°C to +125°C, unless otherwise noted.)

### **Pin Description**

| PIN | NAME  | FUNCTION  |
|-----|-------|---|
| 1   | X1    | Crystal Drive/Clock Input. A crystal with the proper loading capacitors is connected across X1 and X2. Instead of a crystal, a clock can be applied at the X1 input.                |
| 2   | GND   | Signal Ground   |
| 3   | CMSEL | Clock Multiplier Select. Tri-level digital input.<br>0 = 1x<br>Open = 2x<br>1 = 4x  |
| 4   | SMSEL | Spread-Spectrum Magnitude Select. Tri-level digital input.<br>0 = $\pm 0.5\%$<br>Open = $\pm 1.0\%$<br>1 = $\pm 1.5\%$  |
| 5   | PDN   | Power-Down/Spread-Spectrum Disable. Tri-level digital input.<br>0 = Power-Down/SSO Three-Styled<br>Open = Power-Up/Spread Spectrum Disabled<br>1 = Power-Up/Spread Spectrum Enabled |
| 6   | SSO   | Spread-Spectrum Clock Multiplier Output. Outputs a 1x, 2x, or 4x spread-spectrum version of the crystal or clock applied at the X1/X2 pins.   |
| 7   | Vcc   | Supply Voltage  |
| 8   | X2    | Crystal Drive Output. A crystal with the proper loading capacitors is connected across X1 and X2. If a clock is connected to X1, then X2 should be left open circuit.               |

### **Block Diagram**

# DS1080L

## Spread-Spectrum Crystal Multiplier

### Detailed Description

The DS1080L is a crystal multiplier with center spread-spectrum capability. A 16MHz to 33.4MHz crystal is connected to the X1 and X2 pins. Alternately, a 16MHz to 33.4MHz clock can be applied to X1 in place of the crystal. In such applications, X2 would be left open circuit. Using the CMSEL input, the user selects whether the attached crystal or input clock is multiplied by 1, 2, or 4. The DS1080L is capable of generating spread-spectrum clocks from 16MHz to 134MHz.

The PLL can dither the output clock about its center frequency at a user-selectable magnitude. Using the SMSEL input, the user selects the dither magnitude. The  $\overline{PDN}$  input can be used to place the device into a low-power standby mode where the SSO output is tri-stated. If the  $\overline{PDN}$  pin is open, the SSO output is active but the spread-spectrum dithering is disabled. The spread-spectrum dither rate is fixed at  $f_{IN} / 992$  to keep the dither rate above the audio frequency range. On power-up, the output clock (SSO) remains three-stated until the PLL reaches a stable frequency ( $f_{SSO}$ ) and dither ( $f_{DITHER}$ ).

### Applications Information

#### Crystal Selection

The DS1080L requires a parallel resonating crystal operating in the fundamental mode, with an ESR of less than  $90\Omega$ . The crystal should be placed very close to the device to minimize excessive loading due to parasitic capacitances.

#### Oscillator Input

When driving the DS1080L using an external oscillator clock, consider the input (X1) to be high impedance.

#### Crystal Capacitor Selection

The load capacitors  $C_{L1}$  and  $C_{L2}$  are selected based on the crystal specifications (from the data sheet of the crystal used). The crystal parallel load capacitance is calculated as follows:

$$C_L = \frac{C_{L1} \times C_{L2}}{C_{L1} + C_{L2}} + C_{IN} \quad \text{Equation 1}$$

For the DS1080L use  $C_{L1} = C_{L2} = CLX$ .

In this case, the equation then reduces to:

$$C_L = \frac{CLX}{2} + C_{IN} \quad \text{Equation 2}$$

where  $C_{L1} = C_{L2} = CLX$ .

Equation 2 is used to calculate the values of  $C_{L1}$  and  $C_{L2}$  based on values on  $C_L$  and  $C_{IN}$  noted in the data sheet electrical specifications.

#### Power-Supply Decoupling

To achieve best results, it is highly recommended that a decoupling capacitor is used on the IC power-supply pins. Typical values of decoupling capacitors are  $0.001\mu F$  and  $0.1\mu F$ . Use a high-quality, ceramic, surface-mount capacitor, and mount it as close as possible to the VCC and GND pins of the IC to minimize lead inductance.

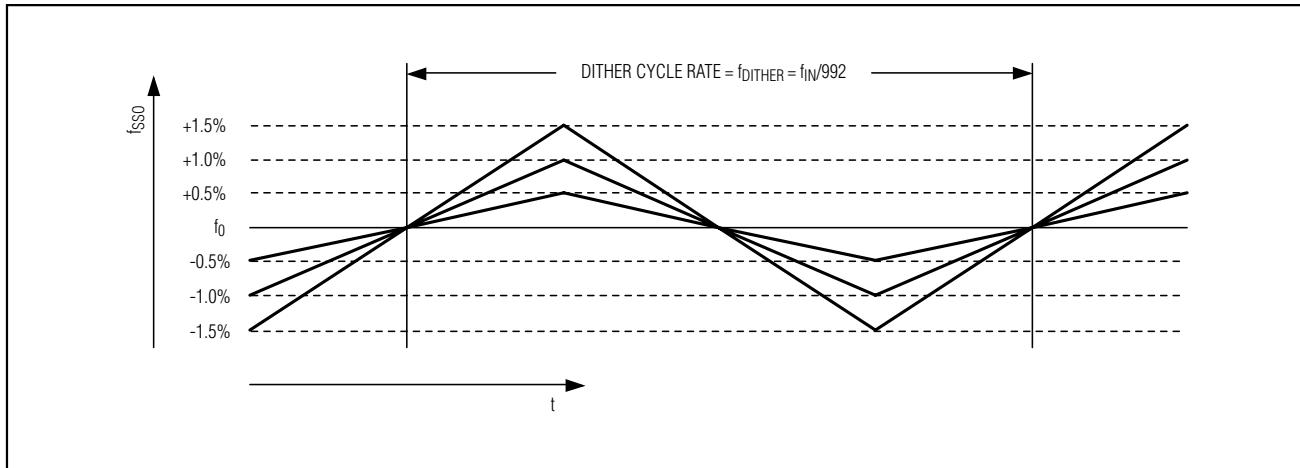

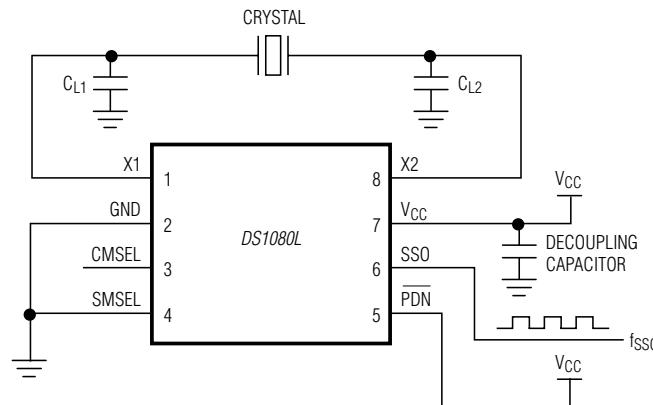

Figure 1. Spread-Spectrum Frequency Modulation

# DS1080L

## Spread-Spectrum Crystal Multiplier

### Typical Operating Circuit

**NOTE:** IN THE ABOVE CONFIGURATION WITH PDN CONNECTED TO V<sub>CC</sub>, SMSEL CONNECTED TO GND AND CMSEL OPEN, THE DEVICE IS IN NORMAL OPERATION WITH 2x CLOCK MULTIPLICATION, AND SPREAD-SPECTRUM MAGNITUDE OF  $\pm 0.5\%$ .

### Layout Considerations

As noted earlier, the crystal should be placed very close to the device to minimize excessive loading due to parasitic capacitances. Care should also be taken to minimize loading on pins that could be open as a programming option (SMSEL and CMSEL). Coupling on inputs due to clocks should be minimized.

### Package Information

For the latest package outline information and land patterns (footprints), go to [www.maximintegrated.com/packages](http://www.maximintegrated.com/packages). Note that a "+", "#", or "-" in the package code indicates RoHS status only. Package drawings may show a different suffix character, but the drawing pertains to the package regardless of RoHS status.
