## Octal channel high side driver

### Features

Type	R <sub>DS(on)</sub>	I <sub>out</sub>	V <sub>CC</sub>
VN808SR	150 mΩ	0.7 A	45 V

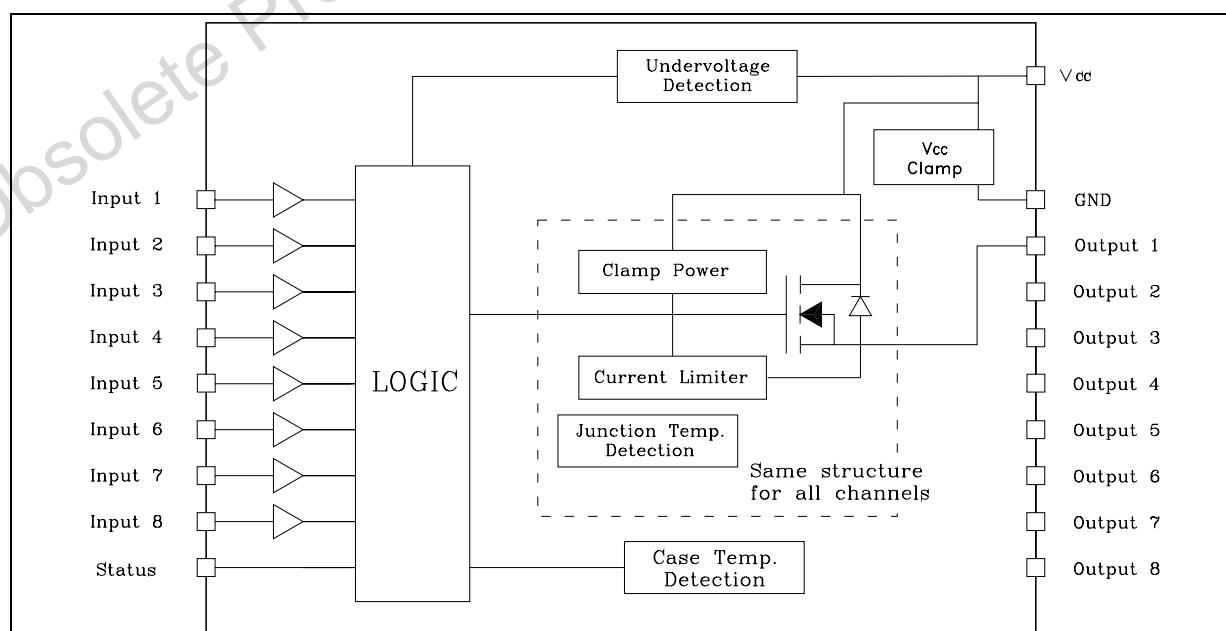

- V<sub>CC</sub>/2 compatible input
- Junction overtemperature protection
- Case overtemperature protection for thermal independence of the channels
- Current limitation
- Shorted load protection
- Undervoltage shut-down
- Protection against loss of ground
- Very low stand-by current
- Compliance to 61000-4-4 IEC test up to 4 kV

Active current limitation combined with thermal shutdown and automatic restart, protect the device against overload. In overload condition, the channel turns OFF and back ON automatically so as to maintain the junction temperature between T<sub>TSD</sub> and T<sub>R</sub>. If this condition makes the case temperature reach T<sub>CSD</sub>, the overloaded channel is turned OFF and restarts only when the case temperature has decreased to T<sub>CR</sub> (see waveform 3 *Figure 7 on page 10*). Non overloaded channels continue to operate normally. The device automatically turns OFF in the case of a ground pin disconnection. This device is especially suitable for industrial applications and conforms to IEC 61131.

### Description

The VN808SR is a monolithic device designed in STMicroelectronics VIPower M0-3 technology, intended for driving any kind of load with one side connected to ground.

## Reverse polarity protection

VN808SR

## 6 Reverse polarity protection

This schematic can be used with any type of load.

The following is an indication on how to dimension the  $R_{GND}$  resistor.

$$R_{GND} = (-V_{CC}) / (-I_{GND})$$

where  $-I_{GND}$  is the DC reverse ground pin current and can be found in the absolute maximum rating section of the device datasheet.

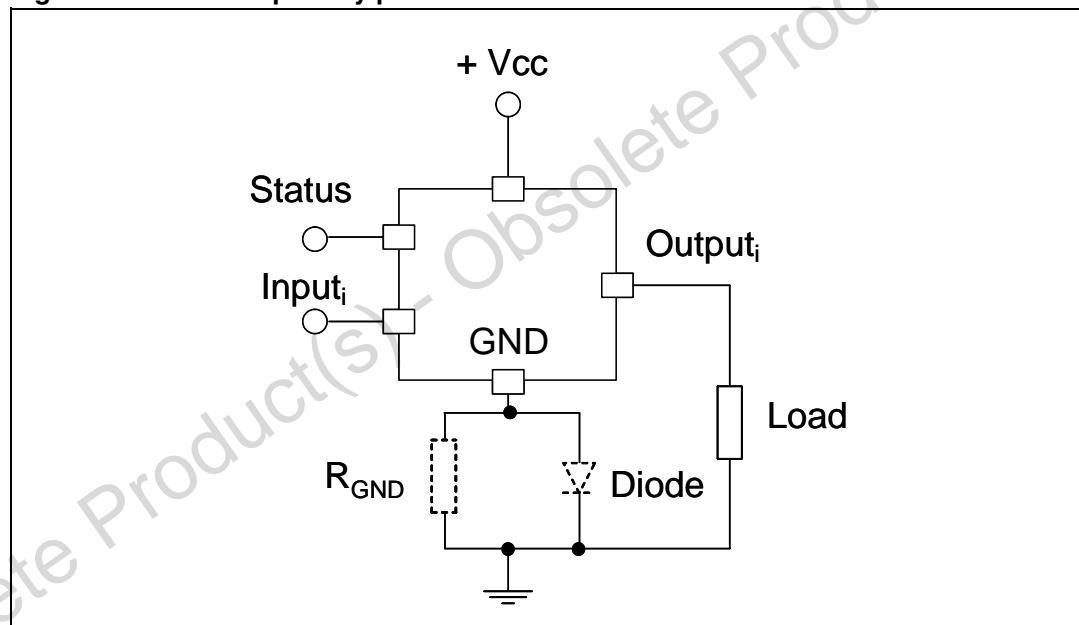

Power dissipation in  $R_{GND}$  (when  $V_{CC} < 0$ : during reverse polarity situations) is:

$$PD = (-V_{CC})^2 / R_{GND}$$

Note:

*In normal condition (no reverse polarity) due to the diode there will be a voltage drop between GND of the device and GND of the system.*
