TPD4S009 4-Channel ESD Solution for High-Speed Differential Interface

1 Features

- IEC 61000-4-2 Level 4 ESD Protection
 - ±8-kV Contact Discharge
- IEC 61000-4-5 Surge Protection
 - 2.5A (8/20µs)
- I/O Capacitance: 0.8 pF (Typical)
- Low Leakage Current: 10 nA (Typical)
- Supports High-Speed Differential Data Rates (3-dB Bandwidth > 4 GHz)
- Ultra-low Matching Capacitance Between Differential Signal Pairs
- I_{off} Feature for the TPD4S009
- Industrial Temperature Range: –40°C to 85°C
- Easy Straight through Routing, Space-Saving Package Options

2 Applications

- End Equipment
 - Set-Top Boxes
 - DTVs
 - Laptop/Desktop
 - Electronic Point of Sale (EPOS)
- Interfaces
 - USB 2.0
 - HDMI 1.4
 - LVDS
 - SATA
 - Ethernet
 - FireWire

3 Description

The TPD4S009 and TPD4S010 are four-channel TVS diode arrays for electrostatic discharge (ESD) protection. TPD4S009 and TPD4S010 are rated to dissipate contact ESD strikes at the maximum level specified in the IEC 61000-4-2 international standard (Level 4), with ±8-kV contact discharge ESD protection. The low capacitance (0.8-pF) of these devices, coupled with the excellent matching between differential signal pairs (0.05-pF line-line capacitance for the TPD4S009DRY) enables this device to provide transient voltage suppression circuit protection for high-speed differential data rates (3-dB bandwidth > 4 GHz).

The TPD4S009 is offered in DBV, DCK, DGS, and DRY packages. The TPD4S009DRYR is the most space saving package option available for dual pair high-speed differential lines. The TPD4S010 is offered in the industry standard DQA package. The TPD4S009DGSR and TPD4S010DQAR offer flow-through board layout options to reduce signal glitches normally caused by routing mismatches between the D+ and D- signal pair. See also [TPD4E05U06DQAR](#) which is P2P compatible with TPD4S010DQAR. This device offers higher IEC ESD protection, lower capacitance, lower R_{DYN}, lower DC breakdown voltage, and lower clamping voltage.

Device Information⁽¹⁾

7 Detailed Description

7.1 Overview

The TPD4S009 and TPD4S010 are four-channel TVS diode arrays for electrostatic discharge (ESD) protection. TPD4S009 and TPD4S010 are rated to dissipate contact ESD strikes at the maximum level specified in the IEC 61000-4-2 international standard (Level 4), with ±8-kV contact discharge ESD protection. The low 0.8 pF capacitance of these devices, coupled with the excellent matching between differential signal pairs (0.05-pF line-line capacitance for the TPD4S009DRY) enables this device to operate at high-speed differential data rates (3-dB bandwidth > 4 GHz).

The TPD4S009 offers an optional V_{CC} supply pin which can be connected to system supply plane. There is a blocking diode at the V_{CC} pin to enable the loff feature for the TPD4S009. The TPD4S009 can handle live signal at the D+, D- pins when the V_{CC} pin is connected to zero volt. The V_{CC} pin allows all the internal circuit nodes of the TPD4S009 to be at known potential during start up time. However, connecting the optional V_{CC} pin to board supply plane doesn't affect the system level ESD performance of the TPD4S009. The TPD4S010 does not offer the V_{CC} pin.

7.2 Functional Block Diagram

Figure 6. TPD4S009

Figure 7. TPD4S010

7.3 Feature Description

7.3.1 ±8-kV IEC61000-4-2 Level 4 Contact ESD Protection

The I/O pins can withstand ESD events up to ±8-kV contact and ±9-kV air. An ESD/surge clamp diverts the current to ground.

7.3.2 IEC61000-4-5 Surge Protection

The I/O pins can withstand surge events up to 2.5 A and 25 W (8/20 μs waveform). An ESD/surge clamp diverts this current to ground.

7.3.3 I/O Capacitance

The capacitance between each I/O pin to ground is 0.8 pF (typical) for both TPD4S009 and TPD4S010. These devices support data rates up to 3.4 Gbps.

7.3.4 Low Leakage Current

The I/O pins feature a low leakage current of 10 nA (typical) with an IO bias of 3.3 V and V_{CC} bias of 5V.

7.3.5 Supports High-Speed Differential Data Rates

The I/O pins low capacitance of 0.8 pF (typical) gives them a typical –3 dB bandwidth > 4GHz. This allows TPD4S009 and TPD4S010 to protect interfaces with high speed signals like HDMI 1.4.

7.3.6 Ultra-low Matching Capacitance Between Differential Signal Pairs

The monolithic silicon technology allows matching between the differential signal pairs. The excellent matching between the differential pair signal lines (0.05-pF line-line capacitance for the TPD4S009DRY) enables this device to operate at high-speed differential data rates (3-dB bandwidth > 4 GHz). Excellent matching capacitance between differential signal pairs is also crucial to minimize the inter-pair and intra-pair skew between differential signals, which is crucial for many high-speed signal interfaces like HDMI 1.4.

7.3.7 I_{off} Feature for the TPD4S009

The TPD4S009 offers an optional V_{CC} supply pin which can be connected to system supply plane. There is a blocking diode at the V_{CC} pin which makes it so the TPD4S009 can handle live signal at the D+, D- pins when the V_{CC} pin is connected to zero volt. This is the I_{off} feature, which is crucial for HDMI, as a live signal can be put on the IO pins when the system is powered off. The TPD4S010 does not offer the V_{CC} pin.

7.3.8 Industrial Temperature Range

This device features an industrial operating range of –40°C to 85°C.

7.3.9 Easy Flow-Through Routing

The layout of this device makes it simple and easy to add protection to an existing layout. The packages offers flow-through routing, requiring minimal modification to an existing layout. Flow-through routing also allows the PCB designer to optimize the signal integrity of any high-speed signals being protected.

7.4 Device Functional Modes

TPD4S009 and TPD4S010 are passive integrated circuits that trigger when voltages are above V_{BR} or below the lower diodes V_f (–0.6 V). During ESD events, voltages as high as ±8 kV (contact) can be directed to ground via the internal diode network. Once the voltages on the protected line fall below the trigger levels of TPD4S009 or TPD4S010 (usually within 10's of nano-seconds) the device reverts back to its high-impedance state.

8 Application and Implementation

NOTE

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

8.1 Application Information

TPD4S009 and TPD4S010 are four-channel TVS diode arrays which are used to provide IEC 61000-4-2 system level ESD protection for a human interface connector. TPD4S009 and TPD4S010 provide a path to ground for dissipating ESD events on hi-speed signal lines between the human interface connector and the system. As the current from ESD passes through the TVS, only a small voltage drop is present across the diode. This is the voltage presented to the protected IC. The low R_{DYN} of the triggered TVS holds this voltage, V_{CLAMP} , to a safe level for the protected IC.

8.2 Typical Application

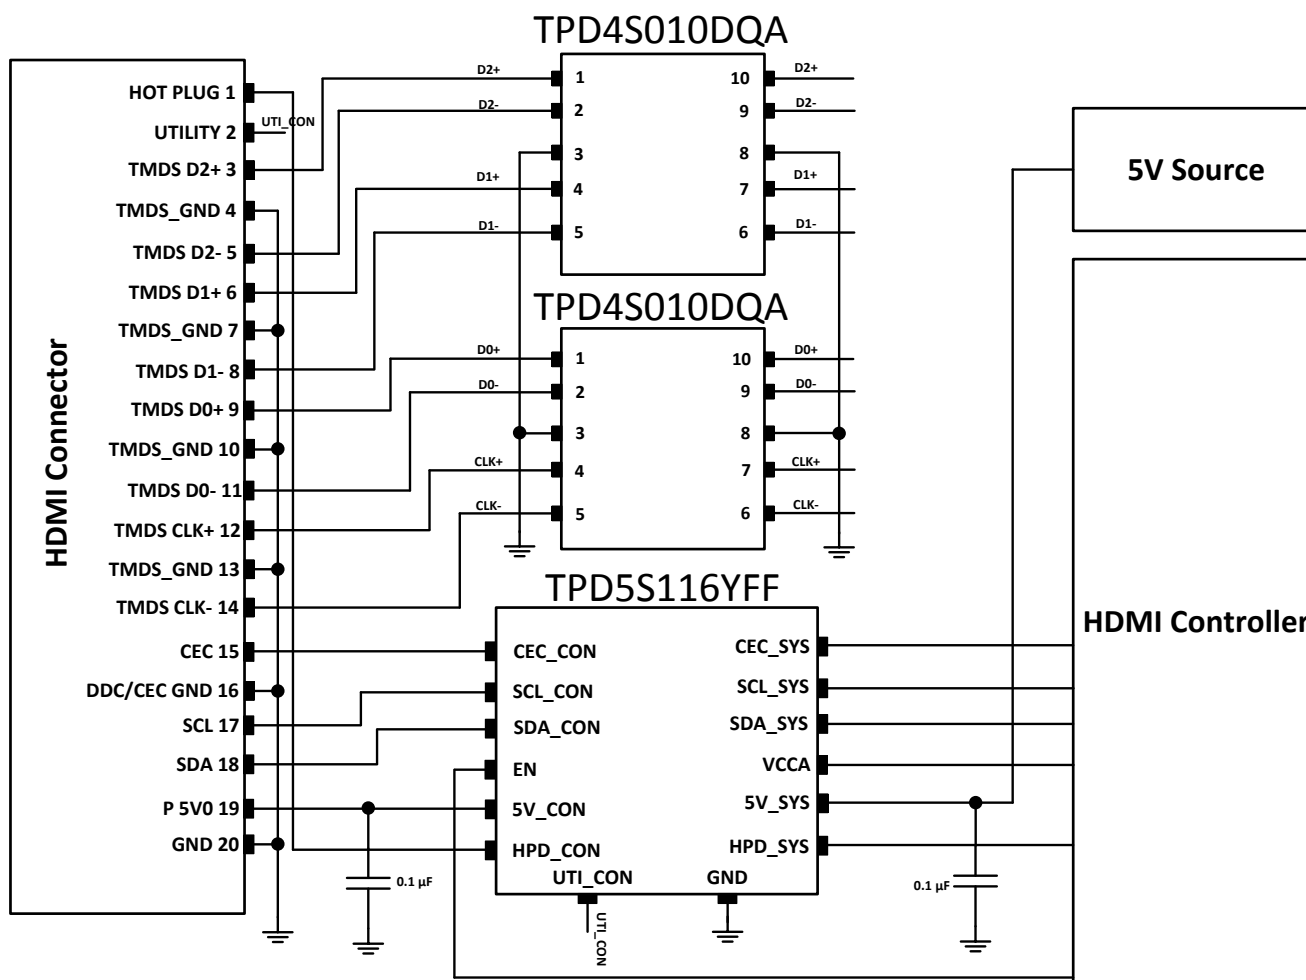

Figure 8. Typical Application Schematic

Typical Application (continued)

8.2.1 Design Requirements

For this design example, two TPD4S010 devices, and one TPD5S116 are being used in an HDMI 1.4 application. This will provide a complete port protection scheme.

Given the HDMI 1.4 application, the following parameters are known.

DESIGN PARAMETER	VALUE
Signal range on Pins 1, 2, 4, or 5	0 V to 3.6 V
Operating Frequency	1.7 GHz

8.2.2 Detailed Design Procedure

To begin the design process, some parameters must be decided upon; the designer needs to know the following:

- Signal range on all the protected lines
- Operating frequency

8.2.2.1 Signal Range on Pin 1, 2, 4, or 5

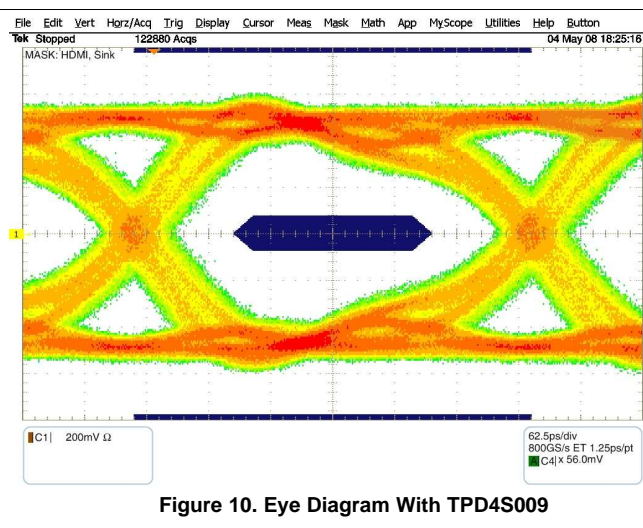

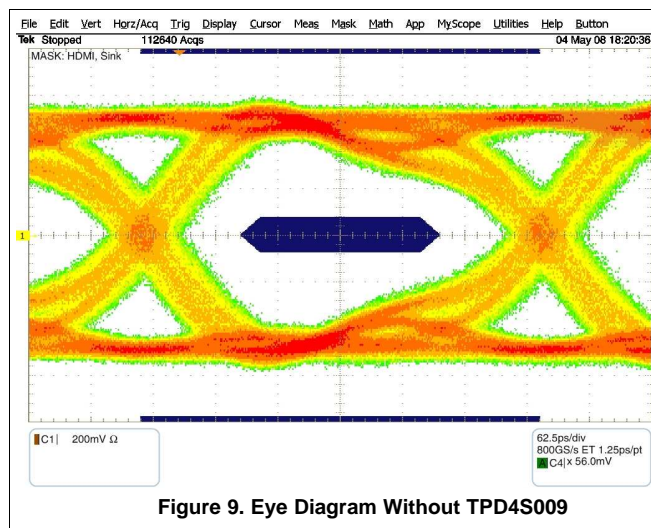

TPD4S010 has 4 identical protection channels for signal lines. The symmetry of the device provides flexibility when selecting which of the 4 I/O channels will protect which signal lines. Any I/O will support a signal range of 0 to 5.5 V. Therefore, this device will support the HDMI 1.4 signal swing.

8.2.2.2 Bandwidth on Pin 1, 2, 4, or 5

Each pin of the TPD4S010 has a typical -3 dB bandwidth of 4GHz. Therefore, this device can handle HDMI 1.4 data rate of 3.4 Gbps with operating frequency of 1.7 GHz.

8.2.3 Application Curves

Figure 9 and Figure 10 are HDMI eye diagram measurements for the TPD4S009. The same eye diagram performance is expected for the TPD4S010.

TPD4S009, TPD4S010

SLVS817G –MAY 2008–REVISED JUNE 2015

www.ti.com

9 Power Supply Recommendations

TPD4S009 and TPD4S010 are passive TVS diodes and so there is no requirement to power them. They are fully functional without any power supply. However, TPD4S009 does provide an option to apply a DC voltage to its V_{CC} pin, whose purpose is to bias the internal central clamp and insure a known voltage on all internal nodes during startup time. This feature is optional, and whether or not a DC voltage is applied to V_{CC} does not affect the ESD performance of this device.

10 Layout

10.1 Layout Guidelines

- The optimum placement is as close to the connector as possible.
 - EMI during an ESD event can couple from the trace being struck to other nearby unprotected traces, resulting in early system failures.
 - The PCB designer needs to minimize the possibility of EMI coupling by keeping any unprotected traces away from the protected traces which are between the TVS and the connector.
- Route the protected traces as straight as possible.
- Eliminate any sharp corners on the protected traces between the TVS and the connector by using rounded corners with the largest radii possible.
 - Electric fields tend to build up on corners, increasing EMI coupling.

10.2 Layout Example

This is a layout example for TPD4S010 being used to protect HDMI TMDS Lines.

(1) The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBSOLETE: TI has discontinued the production of the device.

(2) Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check <http://www.ti.com/productcontent> for the latest availability information and additional product content details.

TBD: The Pb-Free/Green conversion plan has not been defined.

Pb-Free (RoHS): TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.

Pb-Free (RoHS Exempt): This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.

Green (RoHS & no Sb/Br): TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

⁽⁵⁾ Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "-" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

⁽⁶⁾ Lead/Ball Finish - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead/Ball Finish values may wrap to two lines if the finish value exceeds the maximum column width.

Important Information and Disclaimer: The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties.  - D. Falls within JEDEC MO-187 variation BA.

LAND PATTERN DATA

DGS (S-PDSO-G10)

PLASTIC SMALL OUTLINE PACKAGE

- NOTES:
- A. All linear dimensions are in millimeters.
 - B. This drawing is subject to change without notice.
 - C. Publication IPC-7351 is recommended for alternate designs.
 - D. Laser cutting apertures with trapezoidal walls and also rounding corners will offer better paste release. Customers should contact their board assembly site for stencil design recommendations. Refer to IPC-7525 for other stencil recommendations.
 - E. Customers should contact their board fabrication site for solder mask tolerances between and around signal pads.

MECHANICAL DATA

DCK (R-PDSO-G6)

PLASTIC SMALL-OUTLINE PACKAGE

- NOTES:
- A. All linear dimensions are in millimeters.
 - B. This drawing is subject to change without notice.
 - C. Body dimensions do not include mold flash or protrusion. Mold flash and protrusion shall not exceed 0.15 per side.
 - D. Falls within JEDEC MO-203 variation AB.

DRY (R-PUSON-N6)

PLASTIC SMALL OUTLINE NO-LEAD

4207181/F 12/11

- NOTES:
- A. All linear dimensions are in millimeters. Dimensioning and tolerancing per ASME Y14.5M-1994.
 - B. This drawing is subject to change without notice.
 - C. SON (Small Outline No-Lead) package configuration.
 - △ The exposed lead frame feature on side of package may or may not be present due to alternative lead frame designs.
 - E. This package complies to JEDEC MO-287 variation UFAD.
 - △ See the additional figure in the Product Data Sheet for details regarding the pin 1 identifier shape.

LAND PATTERN DATA

DRY (R-PUSON-N6)

PLASTIC SMALL OUTLINE NO-LEAD

- NOTES:
- A. All linear dimensions are in millimeters.
 - B. This drawing is subject to change without notice.
 - C. Publication IPC-7351 is recommended for alternate designs.
 - D. Customers should contact their board fabrication site for minimum solder mask web tolerances between signal pads.
 - E. Maximum stencil thickness 0,127 mm (5 mils). All linear dimensions are in millimeters.
 - F. Laser cutting apertures with trapezoidal walls and also rounding corners will offer better paste release. Customers should contact their board assembly site for stencil design recommendations. Refer to IPC 7525 for stencil design considerations.
 - G. Side aperture dimensions over-print land for acceptable area ratio > 0.66. Customer may reduce side aperture dimensions if stencil manufacturing process allows for sufficient release at smaller opening.

IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, enhancements, improvements and other changes to its semiconductor products and services per JESD46, latest issue, and to discontinue any product or service per JESD48, latest issue. Buyers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All semiconductor products (also referred to herein as “components”) are sold subject to TI’s terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its components to the specifications applicable at the time of sale, in accordance with the warranty in TI’s terms and conditions of sale of semiconductor products. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by applicable law, testing of all parameters of each component is not necessarily performed.

TI assumes no liability for applications assistance or the design of Buyers’ products. Buyers are responsible for their products and applications using TI components. To minimize the risks associated with Buyers’ products and applications, Buyers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right relating to any combination, machine, or process in which TI components or services are used. Information published by TI regarding third-party products or services does not constitute a license to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of significant portions of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI components or services with statements different from or beyond the parameters stated by TI for that component or service voids all express and any implied warranties for the associated TI component or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

Buyer acknowledges and agrees that it is solely responsible for compliance with all legal, regulatory and safety-related requirements concerning its products, and any use of TI components in its applications, notwithstanding any applications-related information or support that may be provided by TI. Buyer represents and agrees that it has all the necessary expertise to create and implement safeguards which anticipate dangerous consequences of failures, monitor failures and their consequences, lessen the likelihood of failures that might cause harm and take appropriate remedial actions. Buyer will fully indemnify TI and its representatives against any damages arising out of the use of any TI components in safety-critical applications.

In some cases, TI components may be promoted specifically to facilitate safety-related applications. With such components, TI’s goal is to help enable customers to design and create their own end-product solutions that meet applicable functional safety standards and requirements. Nonetheless, such components are subject to these terms.

No TI components are authorized for use in FDA Class III (or similar life-critical medical equipment) unless authorized officers of the parties have executed a special agreement specifically governing such use.

Only those TI components which TI has specifically designated as military grade or “enhanced plastic” are designed and intended for use in military/aerospace applications or environments. Buyer acknowledges and agrees that any military or aerospace use of TI components which have **not** been so designated is solely at the Buyer’s risk, and that Buyer is solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI has specifically designated certain components as meeting ISO/TS16949 requirements, mainly for automotive use. In any case of use of non-designated products, TI will not be responsible for any failure to meet ISO/TS16949.
