DATASHEET

BUFFER/CLOCK DRIVER

MK3807-01

Description

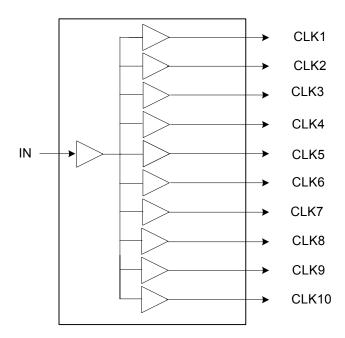

The MK3807-01 is a low skew 3.3 V, 1 to 10 fanout buffer. The large fanout from a single input line reduces loading on the input clock. The TTL level outputs reduce noise levels on the part. Typical applications are clock and signal distribution.

Features

- Packaged in 20-pin SSOP
- Available in Pb (lead) free package
- 1 to 10 fanout buffer
- Maximum skew between outputs of same package 0.35 ns
- Maximum skew between outputs of different packages 0.75 ns
- Max propagation delay of 3.8 ns
- · Operating voltage of 3.3 V
- · Advanced, low power, CMOS process
- Industrial temperature range -40° C to +85° C
- Hysteresis on all inputs

NOTE: EOL for non-green parts to occur on 5/13/10 per PDN U-09-01

Pin Assignment

Pin Descriptions

| Pin Number | Pin Name | Pin Type | Pin Description |
|---------------|-------------|-------------|--------------------|
| 1 | IN | Input | Clock input. |
| 2 | GND | Power | Connect to ground. |
| 3 | CLK1 | Output | Clock output. |
| 4 | VDD | Power | Connect to +3.3 V. |
| 5 | CLK2 | Output | Clock output. |
| 6 | GND | Power | Connect to ground. |
| 7 | CLK3 | Output | Clock output. |
| 8 | VDD | Power | Connect to +3.3 V. |
| 9 | CLK4 | Output | Clock output. |
| 10 | GND | Power | Connect to ground. |
| 11 | CLK5 | Output | Clock output. |
| 12 | CLK6 | Output | Clock output. |
| 13 | GND | Power | Connect to ground. |
| 14 | CLK7 | Output | Clock output. |
| 15 | VDD | Power | Connect to +3.3 V. |
| 16 | CLK8 | Output | Clock output. |
| 17 | GND | Power | Connect to ground. |
| 18 | CLK9 | Output | Clock output. |
| 19 | CLK10 | Output | Clock output. |
| 20 | VDD | Power | Connect to +3.3 V. |

MK3807-01 BUFFER/CLOCK DRIVER

FAN OUT BUFFER

External Components

The MK3807-01 requires a minimum number of external components for proper operation.

Decoupling Capacitors

Decoupling capacitors of $0.01\mu F$ must be connected between VDD and GND, as close to these pins as possible. For optimum device performance, the decoupling capacitors should be mounted on the component side of the PCB. Avoid the use of vias in the decoupling circuit.

Series Termination Resistor

When the PCB trace between the clock outputs and the loads are over 1 inch, series termination should be used. To series terminate a 50Ω trace (a commonly used trace impedance) place a 33Ω resistor in series with the clock line, as close to the clock output pin as possible. The nominal impedance of the clock output is 20Ω

PCB Layout Recommendations

For optimum device performance and lowest output phase noise, the following guidelines should be observed.

- 1) The $0.01\mu F$ decoupling capacitors should be mounted on the component side of the board as close to the VDD pins as possible. No vias should be used between the decoupling capacitors and VDD pins. The PCB trace to VDD pin should be kept as short as possible, as should the PCB trace to the ground via.
- 2) To minimize EMI, the 33Ω series termination resistor, (if needed) should be placed close to the clock output.

Absolute Maximum Ratings

Stresses above the ratings listed below can cause permanent damage to the MK3807-01. These ratings, which are standard values for IDT commercially rated parts, are stress ratings only. Functional operation of the device at these or any other conditions above those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods can affect product reliability. Electrical parameters are guaranteed only over the recommended operating temperature range.

| Item | Rating |
|-------------------------------|---------------------|
| Supply Voltage, VDD | 7 V |
| All Inputs and Outputs | -0.5 V to VDD+0.5 V |
| Ambient Operating Temperature | -40 to +85° C |
| Storage Temperature | -65 to +150° C |
| Junction Temperature | 125° C |
| Soldering Temperature | 260° C |

Recommended Operation Conditions
