DM74AS874 **Dual 4-Bit D-Type Edge-Triggered Flip-Flop**

General Description

These dual 4-bit inverting registers feature totem-pole 3-STATE outputs designed specifically for driving highlycapacitive or relatively low-impedance loads. The highimpedance state and increased high-logic-level drive provide these registers with the capability of being connected directly to and driving the bus lines in a bus-organized system without need for interface or pull-up components. They are particularly attractive for implementing buffer registers, I/O ports, bidirectional bus drivers, and working registers.

The eight flip-flops of the DM74AS874 are edge-triggered D-type flip-flops. On the positive transition of the clock, the Q outputs will be set to the logic states that were set up at the D inputs.

A buffered output control input can be used to place the eight outputs in either a normal logic state (HIGH or LOW logic levels) or a high-impedance state. In the high-impedance state the outputs neither load nor drive the bus lines significantly.

The output control does not affect the internal operation of the flip-flops. That is, the old data can be retained or new data can be entered even while the outputs are OFF.

The pinout is arranged to ease printed circuit board layout. All data inputs are on one side of the package, while all outputs are on the other side.

Features

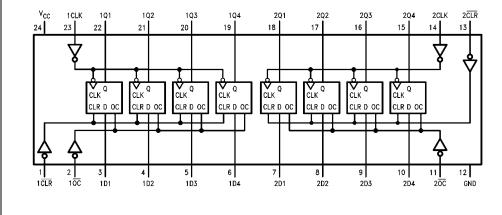

- Switching specifications at 50 pF
- Switching specifications guaranteed over full temperature and V_{CC} range
- Advanced oxide-isolated, ion-implanted Schottky TTL
- process
- 3-STATE buffer-type outputs drive bus lines directly ■ Space saving 300 mil wide package
- Bus structured pinout

Ordering Code:

Order Number	Package Number	Package Description
DM74AS874WM	M24B	24-Lead Small Outline Integrated Circuit (SOIC), JEDEC MS-013, 0.300" Wide
DM74AS874NT	N24C	24-Lead Plastic Dual-In-Line Package (PDIP), JEDEC MS-001, 0.300" Wide
Devices also available	in Tape and Reel. Specify	y by appending the suffix letter "X" to the ordering code.

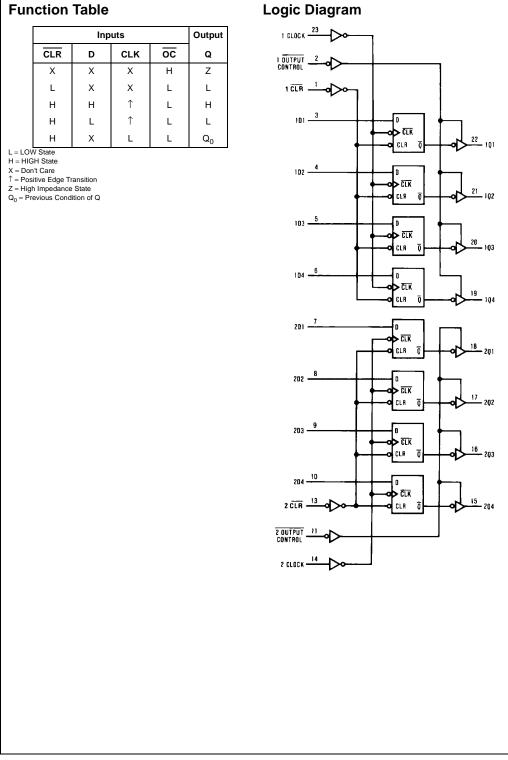

nd Reel. Specify by appending the suffix letter "X" to the ordering o

Connection Diagram

DM74AS874

Absolute Maximum Ratings(Note 1)

Supply Voltage	7V
Input Voltage	7V
Voltage Applied to Disabled Output	5.5V
Operating Free Air Temperature Range	$0^{\circ}C$ to $+70^{\circ}C$
Storage Temperature Range	$-65^\circ C$ to $+150^\circ C$
Typical θ_{JA}	
N Package	47.0°C/W

Note 1: The "Absolute Maximum Ratings" are those values beyond which the safety of the device cannot be guaranteed. The device should not be operated at these limits. The parametric values defined in the Electrical Characteristics tables are not guaranteed at the absolute maximum ratings. The "Recommended Operating Conditions" table will define the conditions for actual device operation.

DM74AS874
