bq3060

SLUS928B - MARCH 2009 - REVISED JULY 2016

bq3060 SBS 1.1-Compliant Gas Gauge and Protection With CEDV

Not Recommended for New Designs

1 Features

- Advanced CEDV (Compensated End-of-Discharge Voltage) Gauging
- Fully Integrated 2, 3, and 4 Series Li-lon or Li-Polymer Cell Battery Pack Manager
- 8-Bit RISC CPU With Ultra-Low Power Modes
- Full Array of Programmable Protection Features
 - Voltage, Current, and Temperature
- SHA-1 Authentication
- Flexible Memory Architecture With Integrated Flash Memory
- Supports Two-Wire SMBus v1.1 Interface With High-speed 400kHz Programming Option
- P-CH High Side Protection FET Drive
- Low Power Consumption Sleep Mode: < 69 μA
- High-Accuracy Analog Front End With Two Independent ADCs
 - High-Resolution, 15~22-bit Integrator for Coulomb Counting
 - 16-Bit Delta-Sigma ADC With a 16-Channel Multiplexer for Voltage, Current, and Temperature
- Ultra Compact Package: 24-Pin TSSOP PW

2 Applications

- Netbook and Notebook PCs
- Medical and Test Equipment
- · Portable Instruments

3 Description

The Texas Instruments bq3060 Battery Manager is a fully integrated, single-chip, pack-based solution that provides a rich array of features for gas gauging, protection, and authentication for 2, 3, or 4 series cell Li-lon battery packs. With a footprint of merely 7.8 mm \times 6.4 mm in a compact 24-pin TSSOP package, the bq3060 maximizes functionality and safety while dramatically cutting the solution cost and size for smart batteries.

Using its integrated high-performance analog peripherals, the bq3060 measures and maintains an accurate record of available capacity, voltage, current, temperature, and other critical parameters in Li-lon or Li-Polymer batteries, and reports the information to the system host controller over an SMBus 1.1-compatible interface.

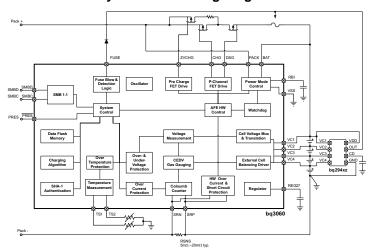

The bq3060 provides software-first level and second level safety protection on overvoltage, undervoltage, overtemperature, and overcharge, as well as hardware-overcurrent in discharge, short circuit in charge, and discharge protection.

Device Information⁽¹⁾

PART NUMBER	PACKAGE	BODY SIZE (NOM)
bq3060	TSSOP (24)	4.4 mm × 7.8 mm

(1) For all available packages, see the orderable addendum at the end of the data sheet.

5 Pin Configuration and Functions

Pin Functions

PIN		1/0	DECORPTION		
NAME	NO.	1/0	DESCRIPTION		
BAT	1	Р	Power input from battery		
DSG	2	0	P-CH FET Drive controlling discharge		
VC1	3	IA	Sense voltage input terminal and external cell balancing drive output for most positive cell, and battery stack measurement input.		
VC2	4	IA	Sense voltage input terminal and external cell balancing drive output for second most positive cell.		
VC3	5	IA	Sense voltage input terminal and external cell balancing drive output for third most positive cell.		
VC4	6	IA	Sense voltage input terminal and external cell balancing drive output for least positive cell.		
SRP	7	IA	Analog input pin connected to the internal coulomb-counter peripheral for integrating a small voltage between SRP and SRN where SRP is the top of the sense resistor.		
SRN	8	IA	Analog input pin connected to the internal coulomb-counter peripheral for integrating a small voltage between SRP and SRN where SRN is the bottom of the sense resistor.		
TS1	9	I/O,IA	Thermistor input TS1		
TS2	10	I/O,IA	Thermistor input TS2		
NC	11	_	Keep this pin floating		
NC	12	_	Keep this pin floating		
NC	13	_	Keep this pin floating		
SMBD	14	I/OD	SMBus data pin		
NC	15	_	Keep this pin floating		
SMBC	16	I/OD	SMBus clock pin		
PRES	17	I/OD	Active low input to sense system insertion and typically requires additional ESD protection		
RBI	18	Р	RAM backup pin to provide backup potential to the internal DATA RAM if power is momentarily lost by using a capacitor attached between RBI and VSS		
VSS	19	Р	Device ground		
REG27	20	Р	Internal power supply 2.7V bias output		
FUSE	21	I/OD	Push-pull fuse drive and secondary protector activation input sensing		
ZVCHG	22	0	P-CH precharge FET Drive controlling pre-charge and zero-volt charge		
CHG	23	0	P-CH FET Drive controlling charge		
PACK	24	Р	PACK positive terminal and alternative power source

Specifications

6.1 Absolute Maximum Ratings

Over operating free-air temperature range (unless otherwise noted) (1)

			MIN	MAX	UNIT
V_{MAX}	Supply voltage range	PACK w.r.t. Vss	-0.3	34	V
		VC1, BAT	V _{VC2} -0.3	V _{VC2} +8.5 or 34, whichever is lower	V
		VC2	V _{VC3} -0.3	V _{VC3} +8.5	V
	Input voltage	VC3	V _{VC4} -0.3	V _{VC4} +8.5	V
V _{IN}	range	VC4	V _{SRP} -0.3	V _{SRP} +8.5	V
		SRP, SRN	-0.3	V_{REG27}	V
	Input voltage range Output voltage range Maximum combi	SMBD, SMBC	-0.3	6	V
		TS1, TS2, /PRES	-0.3	$V_{REG27} + 0.3$	V
\/	Output voltage	CHG, DSG, ZVCHG, FUSE	-0.3	BAT	V
Vo	range	RBI, REG27	-0.3	2.75	V
I _{SS}	Maximum combi	ned sink current for input pins		50	mA
T _{FUNC}	Functional temper	erature	-40	110	°C
T _{STG}	Storage tempera	ture	-65	150	°C

Stresses beyond those listed under absolute maximum ratings may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under recommended operating conditions is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

6.2 ESD Ratings

			VALUE	UNIT
		Human-body model (HBM), per ANSI/ESDA/JEDEC JS-001 (1)	±2000	
V _(ESD)	Electrostatic discharge	Charged-device model (CDM), per JEDEC specification JESD22-C101 ⁽²⁾	±500	V

JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process. Manufacturing with

6.3 Recommended Operating Conditions

over operating free-air temperature range (unless otherwise noted)

			MIN	TYP	MAX	UNIT
	Cumply voltogo	PACK			25	V

INSTRUMENTS

bq3060

SLUS928B-MARCH 2009-REVISED JULY 2016

Detailed Description

7.1 Feature Description

7.1.1 Battery Parameter Measurements

The bq3060 uses an integrating delta-sigma analog-to-digital converter (ADC) for current measurement, and a second delta-sigma ADC for individual cell and battery voltage, and temperature measurement.

7.1.1.1 Charge and Discharge Counting

The integrating delta-sigma ADC measures the charge/discharge flow of the battery by measuring the voltage drop across a small-value sense resistor between the SR1 and SR2 pins. The integrating ADC measures bipolar signals from -0.20 V to 0.25 V. The bq3060 detects charge activity when $V_{SR} = V_{(SRP)}$ - $V_{(SRN)}$ is positive, and discharge activity when $V_{SR} = V_{(SRP)} - V_{(SRN)}$ is negative. The bq3060 continuously integrates the signal over time, using an internal counter. The fundamental rate of the counter is 0.65 nVh.

7.1.1.2 Voltage

The bq3060 updates the individual series cell voltages at one second intervals. The internal ADC of the bq3060 measures the voltage, scales, and offsets, and calibrates it appropriately. To ensure an accurate differential voltage sensing, the IC ground should be connected directly to the most negative terminal of the battery stack, not to the positive side of the sense resistor. This minimizes the voltage drop across the PCB trace.

7.1.1.3 Voltage Calibration and Accuracy

The bq3060 is calibrated for voltage prior to shipping from TI. The bq3060 voltage measurement signal chain (ADC, high voltage translation, circuit interconnect) will be calibrated for each cell. The external filter resistors, connected from each cell to the VCx input of the bq3060, are required to be 1kΩ. The accuracy of the factorycalibrated devices is +/- 10mV per cell at room temperature at 4V cell voltage. Without any customer voltage calibration, this is the level of accuracy expected as long as the filter resistor value is $1k\Omega$. If better voltage accuracy is desired, customer voltage calibration is required. An application note on calibrating and programming the bq3060 is available in the product web folder. See Data Flash Programming and Calibrating the bq3060 Gas Gauge (SLUA502) for more details.

7.1.1.4 Current

The bq3060 uses the SRP and SRN inputs to measure and calculate the battery charge and discharge current using a 5 m Ω to 20 m Ω typ. sense resistor.

7.1.1.5 Auto Calibration

The bq3060 can automatically calibrate its offset between the A to D converter and the output of the high voltage translation circuit. Also, the bg3060 provides an auto-calibration for the coulomb counter to cancel the voltage offset error across SRN and SRP for maximum charge measurement accuracy. The bq3060 performs autocalibration when the SMBus lines stay low continuously for a minimum of 5 s.

7.1.1.6 Temperature

The bg3060 has an internal temperature sensor and inputs for 2 external temperature sensor inputs TS1 and TS2 used in conjunction with two identical NTC thermistors (default is Semitec 103AT) to sense the battery cell temperature. The bq3060 can be configured to use internal or up to 2 external temperature sensors.

7.1.2 Primary (1st Level) Safety Features

The bq3060 supports a wide range of battery and system protection features that can easily be configured. The primary safety features include:

- Cell over/undervoltage protection
- Charge and discharge overcurrent
- Short circuit
- Charge and discharge overtemperature
- AFE Watchdog

bq3060

SLUS928B - MARCH 2009 - REVISED JULY 2016

www.ti.com

Feature Description (continued)

7.1.3 Secondary (2nd Level) Safety Features

The secondary safety features of the bq3060 can be used to indicate more serious faults via the FUSE (pin 21). This pin can be used to blow an in-line fuse to permanently disable the battery pack from charging and discharging. This pin is also used as an input to sense the state of the fuse. The secondary safety protection features include:

- Safety overvoltage
- Safety overcurrent in charge and discharge
- Safety overtemperature in charge and discharge
- Charge FET and Zero-Volt Charge FET fault
- Discharge FET fault
- Cell imbalance detection
- Fuse blow by a secondary voltage protection IC
- AFE register integrity fault (AFE_P)
- AFE communication fault (AFE_C)

7.1.4 Charge Control Features

The bg3060 charge control features include:

- Supports JEITA temperature ranges. Reports charging voltage and charging current according to the active temperature range.
- Handles more complex charging profiles. Allows for splitting the standard temperature range into 2 subranges and allows for varying the charging current according to the cell voltage.
- Reports the appropriate charging current needed for constant current charging and the appropriate charging voltage needed for constant voltage charging to a smart charger using SMBus broadcasts.
- Reduce the charge difference of the battery cells in fully charged state of the battery pack gradually using a voltage-based cell balancing algorithm during charging. A voltage threshold can be set up for cell balancing to be active. This prevents fully charged cells from overcharging and causing excessive degradation and also increases the usable pack energy by preventing premature charge termination
- Supports pre-charging/zero-volt charging
- Supports charge inhibit and charge suspend if battery pack temperature is out of temperature range
- Reports charging fault and also indicate charge status via charge and discharge alarms.

7.1.5 Gas Gauging

The bq3060 uses advanced CEDV (Compensated End-of-Discharge Voltage) technology to measure and calculate the available capacity in battery cells. The bq3060 accumulates a measure of charge and discharge currents and compensates the charge current measurement for temperature and state-of-charge of the battery. The bq3060 estimates self-discharge of the battery and also adjusts the self-discharge estimation based on temperature.

See bq3060 Technical Reference (SLUU319) for further details.

7.1.6 Lifetime Data Logging Features

The bq3060 offers limited lifetime data logging for the following critical battery parameters for analysis purposes:

- Lifetime maximum temperature
- Lifetime minimum temperature
- Lifetime maximum battery cell voltage
- Lifetime minimum battery cell voltage

7.1.7 Authentication

The bg3060 supports authentication by the host using SHA-1.

bq3060

www.ti.com

SLUS928B-MARCH 2009-REVISED JULY 2016

Feature Description (continued)

7.1.8 Configuration

7.1.8.1 System Present Operation

The bq3060 checks the $\overline{\text{PRES}}$ pin periodically (1 second). If $\overline{\text{PRES}}$ input is pulled to ground by external system, the bq3060 detects the presence of the system.

7.1.8.2 2-, 3-, or 4-Cell Configuration

In a 2-cell configuration, VC1 is shorted to VC2 and VC3. In a 3-cell configuration, VC1 is shorted to VC2.

7.1.8.3 Cell Balance Control

If cell balancing is required, the bq3060 cell balance control allows a weak, internal pull-down for each VCx pin. The purpose of this weak pull-down is to enable an external FET for current bypass. Series resistors placed between the input VCx pins and the positive battery cell terminals control the VGS of the external FET. See bq3060 Cell balancing using external MOSFET (SLUA509) or bq3060 Gas Gauge Circuit Design (SLUA507) for more details.

7.1.9 Communications

The bq3060 uses SMBus v1.1 with Master Mode and package error checking (PEC) options per the SBS specification.

7.1.9.1 SMBus On and Off State

The bq3060 detects an SMBus off state when SMBC and SMBD are logic-low for ≥ 2 seconds. Clearing this state requires either SMBC or SMBD to transition high. Within 1 ms, the communication bus is available.

7.1.10 SBS Commands

See bg3060 Technical Reference (SLUU319) for further details.

7.2 Device Functional Modes

7.2.1 Power Modes

The bq3060 supports 3 different power modes to reduce power consumption:

- In Normal Mode, the bq3060 performs measurements, calculations, protection decisions and data updates in 1 second intervals. Between these intervals, the bq3060 is in a reduced power stage.
- In Sleep Mode, the bq3060 performs measurements, calculations, protection decisions and data update in adjustable time intervals. Between these intervals, the bq3060 is in a reduced power stage. The bq3060 has a wake function that enables exit from Sleep mode, when current flow or failure is detected.
- In Shutdown Mode the bg3060 is completely disabled.

8.2 Receiving Notification of Documentation Updates

To receive notification of documentation updates, navigate to the device product folder on ti.com. In the upper right corner, click on Alert me to register and receive a weekly digest of any product information that has changed. For change details, review the revision history included in any revised document.

8.3 Community Resources

The following links connect to TI community resources. Linked contents are provided "AS IS" by the respective contributors. They do not constitute TI specifications and do not necessarily reflect TI's views; see TI's Terms of Use.

TI E2E™ Online Community TI's Engineer-to-Engineer (E2E) Community. Created to foster collaboration among engineers. At e2e.ti.com, you can ask questions, share knowledge, explore ideas and help solve problems with fellow engineers.

Design Support TI's Design Support Quickly find helpful E2E forums along with design support tools and contact information for technical support.

8.4 Trademarks

E2E is a trademark of Texas Instruments.

All other trademarks are the property of their respective owners.

8.5 Electrostatic Discharge Caution

This integrated circuit can be damaged by ESD. Texas Instruments recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage.

ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.

8.6 Glossary

SLYZ022 — TI Glossary.

This glossary lists and explains terms, acronyms, and definitions.

Mechanical, Packaging, and Orderable Information

The following pages include mechanical, packaging, and orderable information. This information is the most current data available for the designated devices. This data is subject to change without notice and revision of this document. For browser-based versions of this data sheet, refer to the left-hand navigation.

PACKAGE OPTION ADDENDUM

1-Jul-2016

PACKAGING INFORMATION

Orderable Device Package Type Package Pins Package Lead/Ball Finish Status Eco Plan MSL Peak Temp Op Temp (°C) **Device Marking** Samples Drawing Qty (1) (2) (6) (3) (4/5)CU NIPDAU Level-2-260C-1 YEAR 3060 BQ3060PW NRND TSSOF 24 Green (RoHS PW 60 -40 to 85 & no Sb/Br) CU NIPDAU BQ3060PWR NRND TSSOF PW Green (RoHS Level-2-260C-1 YEAR 24 2000 -40 to 85 3060 & no Sb/Br)

(1) The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design. PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBSOLETE: TI has discontinued the production of the device.

(2) Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check http://www.ti.com/productcontent for the latest availability information and additional product content details.

TBD: The Pb-Free/Green conversion plan has not been defined.

Pb-Free (RoHS): Tl's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.

Pb-Free (RoHS Exempt): This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between

the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.

Green (RoHS & no Sb/Br): TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight

in homogeneous material)

- (3) MSL, Peak Temp. The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.
- (4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device
- (5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "-" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.
- (6) Lead/Ball Finish Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead/Ball Finish values may wrap to two lines if the finish value exceeds the maximum column width

IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, enhancements, improvements and other changes to its semiconductor products and services per JESD46, latest issue, and to discontinue any product or service per JESD48, latest issue. Buyers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All semiconductor products (also referred to herein as "components") are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its components to the specifications applicable at the time of sale, in accordance with the warranty in TI's terms and conditions of sale of semiconductor products. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by applicable law, testing of all parameters of each component is not necessarily performed.

TI assumes no liability for applications assistance or the design of Buyers' products. Buyers are responsible for their products and applications using TI components. To minimize the risks associated with Buyers' products and applications, Buyers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right relating to any combination, machine, or process in which TI components or services are used. Information published by TI regarding third-party products or services does not constitute a license to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of significant portions of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI components or services with statements different from or beyond the parameters stated by TI for that component or service voids all express and any implied warranties for the associated TI component or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

Buyer acknowledges and agrees that it is solely responsible for compliance with all legal, regulatory and safety-related requirements concerning its products, and any use of TI components in its applications, notwithstanding any applications-related information or support that may be provided by TI. Buyer represents and agrees that it has all the necessary expertise to create and implement safeguards which anticipate dangerous consequences of failures, monitor failures and their consequences, lessen the likelihood of failures that might cause harm and take appropriate remedial actions. Buyer will fully indemnify TI and its representatives against any damages arising out of the use of any TI components in safety-critical applications.

In some cases, TI components may be promoted specifically to facilitate safety-related applications. With such components, TI's goal is to help enable customers to design and create their own end-product solutions that meet applicable functional safety standards and requirements. Nonetheless, such components are subject to these terms.

No TI components are authorized for use in FDA Class III (or similar life-critical medical equipment) unless authorized officers of the parties have executed a special agreement specifically governing such use.

Only those TI components which TI has specifically designated as military grade or "enhanced plastic" are designed and intended for use in military/aerospace applications or environments. Buyer acknowledges and agrees that any military or aerospace use of TI components which have *not* been so designated is solely at the Buyer's risk, and that Buyer is solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI has specifically designated certain components as meeting ISO/TS16949 requirements, mainly for automotive use. In any case of use of non-designated products, TI will not be responsible for any failure to meet ISO/TS16949.
