Technical Data Sheet

Infrared Remote-control Receiver Module

IRM-H2xxT/TR2 SERIES

Features

- High shielding against electric field disturbance.
- Low voltage and low power consumption.
- Very small sizes.
- External dimensions 5.10(L)*4.60(W)*1.45(H)mm.
- High immunity against ambient light.
- Photodiode with integrated circuit.
- TTL and CMOS compatibility.
- High sensitivity.
- Top-received SMD.
- Suitable burst length ≥ 10 pulses/burst.
- RoHS refer to IRM-Vxxx,Hxxx series SGS report
- Pb free.

Descriptions

The device is a miniature SMD type infrared remote control system receiver that has been developed and designed by utilizing the most updated IC technology. The PIN diode and preamplifier are assembled on PCB, the epoxy package is designed as an IR filter. The demodulated output signal can directly be decoded by a microprocessor.

Applications

1. Optical switch
2. Light detecting portion of remote control
 - AV instruments such as Audio, TV, VCR, CD, MD, etc.
 - Home appliances such as Air-conditioner, Fan , etc.
 - The other equipments with wireless remote control.
 - CATV set top boxes
 - Multi-media Equipment

Device Selection Guide

PART	MATERIAL	COLOR
Chip	Silicon	---
Package	Epoxy	Black
Metal case	SPCC	Silver white

IRM-H2xxT/TR2 SERIES

Available Types For Different Carrier Frequencies

Type	Carrier Frequencies (Typ)
IRM-H236T/TR2	36 kHz
IRM-H238T/TR2	38 kHz
IRM-H240T/TR2	40 kHz

Absolute Maximum Ratings (Ta=25°C)

Parameter	Symbol	Rating	Unit	Notice
Supply Voltage	Vcc	6	V	
Operating Temperature	Topr	-25 ~ +80	°C	
Storage Temperature	Tstg	-40 ~ +85	°C	

Recommended Operating Condition

Supply Voltage Rating: Vcc 2.7V to 5.5V

Electro-Optical Characteristics (Ta=25°C , Vcc = 3V)

Parameter	Symbol	MIN.	TYP.	MAX.	Unit	Condition
Supply Current	Icc	---	---	3	mA	No signal input
Peak Wavelength	λ_p	---	940	---	nm	---
Reception Distance	L ₀	8	---	---	m	---
	L ₄₅	5	---	---		
Half Angle(Horizontal)	Θ_h	---	45	---	deg	At the ray axis *1
Half Angle(Vertical)	Θ_v	---	45	---	deg	
High Level Pulse Width	T _H	400	---	800	μs	At the ray axis *2
Low Level Pulse Width	T _L	400	---	800	μs	
High Level Output Voltage	V _H	2.7	---	---	V	
Low Level Output Voltage	V _L	---	0.2	0.5	V	

Notes:

*1 : The ray receiving surface at a vertex and relation to the ray axis in the range of $\theta = 0^\circ$ and $\theta = 45^\circ$.

*2 : A range from 30cm to the arrival distance. Average value of 50 pulses.

EVERLIGHT ELECTRONICS CO.,LTD.

IRM-H2xxT/TR2 SERIES

The Notice of Application:

Transmission remote control signal consist of four parts: Encode Part, IR Transmitter Source, IRM device, Decode Part

1. When IRM-H2xxT code select frequency, it need to well understand the center system of encode part.
2. Strong or weak light of IR Transmitter can affect distance of transmission.
3. Minimum Burst Length T_{burst} (number of pulses per burst) : 10 cycles
4. It needs to ensure the translation range of decode part if it is applied to the pulse-width range.

If the above items hardly assure of its application, it'll cause NG(no good) message from the edge of signal.

Note: This model might not work well with RCA code.

Test Method :

The specified electro-optical characteristics is satisfied under the following Conditions at the controllable distance.

①Measurement place

A place that is nothing of extreme light reflected in the room.

②External light

Project the light of ordinary white fluorescent lamps which are not high Frequency lamps and must be less then 10 Lux at the module surface.

($E_e \leq 10\text{Lux}$)

③Standard transmitter

A transmitter whose output is so adjusted as to $V_o=400\text{mVp-p}$ and the output Wave form shown in Fig.-1.According to the measurement method shown in Fig.-2 the standard transmitter is specified.

However , the infrared photodiode to be used for the transmitter should be

$\lambda_p=940\text{nm}, \Delta\lambda=50\text{nm}$. Also, photodiode is used of PD438B($V_T=5\text{V}$).

(Standard light / Light source temperature 2856°K).

④Measuring system

According to the measuring system shown in Fig.-3

Reliability Test Item And Condition

The reliability of products shall be satisfied with items listed below.

Confidence level : 90%

LTPD : 10%

Reflow Terms: JEDEC Level 4 Specification

Drying; Temp.:125°C 24hrs → Moisture 30°C / 60% RH 96hrs → Reflow Temp.: 260°C±5°C
 10sec, 3 times

Note:

1. Not sooner than 15 minutes and not longer than 4 hours after removal from the temperature/humidity chamber.
2. The time between reflow shall be 5 minutes minimum and 60 minutes maximum.

Test Items	Test Conditions	Failure Judgement Criteria	Samples(n) Defective(c)
Temperature cycle	1 cycle : -25°C ↔ +85°C (30min)(5min)(30min) 300 cycle test	$L_0 \leq L \times 0.8$ $L_{45} \leq L \times 0.8$	n=76,c=0
High temperature test	Temp : +85°C Vcc : 5V 1000hrs	L: Lower specification limit	n=76,c=0
Low temperature storage	Temp : -40°C 1000hrs	*Icc : Operate Current (mA)	n=76,c=0
High temperature High humidity	Ta : 85°C , RH : 85% 1000hrs	Variation $\leq \pm 20\%$:	n=76,c=0

EVERLIGHT ELECTRONICS CO.,LTD.

IRM-H2xxT/TR2 SERIES

Recommended method of storage

Dry box storage is recommended as soon as the aluminum bag has been opened prevent moisture absorption. The following conditions should be observed, if dry boxes are not available:

- Storage temperature 10°C to 30°C
- Storage humidity $\leq 60\%RH$ max.

After more than 72 hours under these conditions moisture content will be too high for Reflow soldering:

In case of moisture absorption, the devices will recover to former condition by drying under the following condition:

- 192 hours at 40°C+5°C/-0°C and 5%RH (dry air / nitrogen) or
- 96 hours at 60°C+5°C and < 5%RH for all device containers or
- 24 hours at 125°C+5°C not suitable for reel or tubes.

ESD Precaution

Proper storage and handing procedures should be followed to prevent ESD damage to the devices especially when they are removed from the Anti-static bag. Electro-Static Sensitive Devices warning labels are on the packing.

Recommended Solder Profile

Notice:

- (1) Reflow soldering should not be done more than two times.
- (2) When soldering, do not put stress on the IRM-H2xxT Series devices during heating.
- (3) After soldering, do not warp the circuit board.

EVERLIGHT ELECTRONICS CO.,LTD.

IRM-H2xxT/TR2 SERIES

Soldering Iron

Each terminal is to go to the tip of soldering iron temperature less than 350°C for 3 seconds within once in less than the soldering iron capacity 25W. Leave two seconds and more intervals, and do soldering of each terminal. Be careful because the damage of the product is often started at the time of the hand solder.

Repairing

Repair should not be done after the Devices have been soldered. When repairing is unavoidable, a double-head soldering iron should be used (as below figure). It should be confirmed beforehand whether the characteristics of the Devices will or will not be damaged by repairing.
