The above terminal drawing is a generic terminal representation. It is not an image of a terminal listed in the scope.

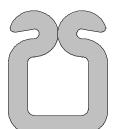

INSULATION CRIMP FORM

This crimp terminal is designed for miniaturization; therefore each dimension of insulation crimp portion appears small as compared to the terminal material thickness. In order to avoid insulation piercing the crimp forms by the insulation barrel, coining is provided inside of the insulation barrel. For this reason, various crimp forms will occur at the tip of the insulation crimp barrel shown in the figure below.

These crimp forms maybe changed completely by a small change in the wire, insulation punch or terminal.

These crimp forms are satisfactory for original function of the insulation crimp portion and it is confirmed that all of these forms below are acceptable insulation crimps.

CRIMP SPECIFICATION

| Terminal Series No. | Bell n | nouth | Cut-off Tab | Maximum | Conductor Brush | |

| 50031 | 5 | 4 | 6 | 8 | 0.80 | .031 | 1.20 | .047 | the crimping area | |

After crimping, the conductor profile should measure the following.

| Terminal Series No. | Wire Size | | Cond Crimp | Pull Force Minimum | | |
|---------------------|-----------|-----------------|---------------|-----------------------|------|------|
| | AWG | mm ² | mm | In. | Ν | Lb. |
| | 30 | 0.05 | 0.48-0.53 | .019021 | 4.89 | 1.10 |

| | 34 | 0.02 | 0.45-0.50 | .017019 | 1.96 | 0.44 |

Pull Force should be measured with no influence from the insulation crimp. The above specifications are guidelines to an optimum crimp.
