AOT424

N-Channel Enhancement Mode Field Effect Transistor

General Description

The AOT424 uses advanced trench technology to provide excellent $R_{DS(ON)}$, low gate charge and low gate resistance. This device is ideally suited for use as a low side switch in CPU core power conversion. *Standard Product AOT424 is Pb-free (meets ROHS & Sony 259 specifications).*

Features

V_{DS} (V) = 30V
 I_D = 110A (V_{GS} = 10V)
 $R_{DS(ON)} < 4m\Omega$ (V_{GS} = 10V)
 $R_{DS(ON)} < 5.5m\Omega$ (V_{GS} = 4.5V)

Absolute Maximum Ratings $T_A=25^\circ\text{C}$ unless otherwise notec

A. The value of R_{θJA} is measured with the device mounted on 1in² FR-4 board with 2oz. Copper, in a still air environment with T_A=25°C. The Power dissipation P_{DSM} is based on steady-state R_{θJA} and the maximum allowed junction temperature of 150°C. The value in any given application depends on the user's specific board design, and the maximum temperature fo 175°C may be used if the PCB or heatsink allows it.

B. The power dissipation P_D is based on T_{J(MAX)}=175°C, using junction-to-case thermal resistance, and is more useful in setting the upper dissipation limit for cases where additional heatsinking is used. It is used to determine the current rating, when this rating falls below the package limit.

C. Repetitive rating, pulse width limited by junction temperature T_{J(MAX)}=175°C.

D. The R_{θJA} is the sum of the thermal impedance from junction to case R_{θJC} and case to ambient.

E. The static characteristics in Figures 1 to 6 are obtained using <300μs pulses, duty cycle 0.5% max.

F. These tests are performed with the device mounted on 1 in² FR-4 board with 2oz. Copper, in a still air environment with T_A=25°C. The SOA curve provides a single pulse rating.

G. The maximum current rating is limited by the package current capability.
