**Precautions**

**G3VM-XN(F)/4N(F) ———— OMRON ———— G3VM-XN(F)/4N(F)**

**! WARNING**  
 Be sure to turn OFF the power when wiring the Relay, otherwise an electric shock may be received.

**! WARNING**  
 Do not touch the charged terminals of the SSR, otherwise an electric shock may be received.

**! Caution**  
 Do not apply overvoltage or overcurrent to the I/O circuits of the SSR, otherwise the SSR may malfunction or burn.

**! Caution**  
 Be sure to wire and solder the Relay under the proper soldering conditions, otherwise the Relay in operation may generate excessive heat and the Relay may burn.

**Typical Relay Driving Circuit Examples**

**C-MOS**

**Transistor**

Use the following formula to obtain the LED current limiting resistance value to assure that the relay operates accurately.

$$R_1 = \frac{V_{CC} - V_{OL} - V_F(ON)}{5 \text{ to } 20 \text{ mA}}$$

Use the following formula to obtain the LED forward voltage value to assure that the relay releases accurately.

$$V_F(OFF) = V_{CC} - V_{OH} < 0.8 \text{ V}$$

**Protection from Surge Voltage on the Input Terminals**

If any reversed surge voltage is imposed on the input terminals, insert a diode in parallel to the input terminals as shown in the following circuit diagram and do not impose a reversed voltage value of 3 V or more.

**Surge Voltage Protection Circuit Example**

**Protection from Spike Voltage on the Output Terminals**

If a spike voltage exceeding the absolute maximum rated value is generated between the output terminals, insert a C-R snubber or clamping diode in parallel to the load as shown in the following circuit diagram to limit the spike voltage.

**Spike Voltage Protection Circuit Example**

**Unused Terminals (6-pin only)**

Terminal 3 is connected to the internal circuit. Do not connect anything to terminal 3 externally.

**Pin Strength for Automatic Mounting**

In order to maintain the characteristics of the relay, the force imposed on any pin of the relay for automatic mounting must not exceed the following.

In direction A: 1.96 N  
 In direction B: 1.96 N

**Load Connection**

Do not short-circuit the input and output terminals while the relay is operating or the relay may malfunction.

**AC Connection**

**DC Single Connection**

**DC Parallel Connection**

**Solder Mounting**

Maintain the following conditions during manual or reflow soldering of the relays in order to prevent the temperature of the relays from rising.

1. Pin Soldering  
 Solder each pin at a maximum temperature of 260°C within 10 s.
2. Reflow Soldering
  - a. Solder each pin at a maximum temperature of 260°C within 10 s.
  - b. Make sure that the ambient temperature on the surface of the resin casing is 240°C max. for 10 s maximum.
  - c. The following temperature changes are recommendable for soldering.

**ALL DIMENSIONS SHOWN ARE IN MILLIMETERS.**

To convert millimeters into inches, multiply by 0.03937. To convert grams into ounces, multiply by 0.03527.
