General Description

The HMC372LP3 & HMC372LP3E are GaAs PHEMT MMIC Low Noise Amplifiers that are ideal for GSM & CDMA cellular basestation front-end receivers operating between 700 and 1000 MHz. The amplifier has been optimized to provide 1 dB noise figure, 15 dB gain and +34 dBm output IP3 from a single supply of +5V @ 100 mA. Input and output return losses are 25 and 14 dB respectively with the LNA requiring only four external components to optimize the RF Input match, RF ground and DC bias. For applications which require improved noise figure, please see the HMC617LP3(E).

Pin Descriptions

Pin Number	Function	Description	Interface Schematic
1, 5, 8, 9	N/C	No connection necessary. These pins may be connected to RF/DC ground.	
2, 4, 6, 10, 12, 13, 14, 16	GND	These pins must be connected to RF/DC ground.	
3	RF IN	This pin is matched to 50 Ohms with a 22 nH inductor to ground. See Application Circuit.	
7, 15	ACG	AC Ground - An external capacitor of 0.01μF to ground is required for low frequency bypassing. See Application Circuit for further details.	
	Vdd	Power supply voltage. Choke inductor and bypass capacitor are required. See application circuit.	
11	RF OUT	This pin is AC coupled and matched to 50 Ohms.	

Application Circuit

Note 1: Choose value of capacitor C1 for low frequency bypassing. A 0.01 μF ±10% capacitor is recommended.
Note 2: L1, L2 and C1 should be located as close to the pins as possible.

[2] Circuit Board Material: Rogers 4350

The circuit board used in the application should use RF circuit design techniques. Signal lines should have 50 Ohm impedance while the package ground leads and exposed paddle should be connected directly to the ground plane similar to that shown. A sufficient number of via holes should be used to connect the top and bottom ground planes. The evaluation circuit board shown is available from Hittite upon request.
