## Microminiature Slide Switches

## Design Features:

- Volume and circuit board area less than $20 \%$ of most conventional sized slide switches of similar circuitry
- Plug-in (PC board) or ear (panel) mounting
- One and two pole
- Two and three position
- Detented or spring return
- Reliable, yet moderately priced
- Low contact resistance

CW microminiature switches are designed to meet industry demand for tiny, yet reliable components at a moderate price. The extended linear motion of the moving contact over the relative closely spaced stationary contacts causes a full wiping and cleaning action of the contacts at each switch actuation. This helps maintain the reliability of the switch even in hostile environments. Where area and volume is limited... computers, thermostats, electronic controls and instruments, games and communication equipment... and reliability is essential... these switches are ideal.
The switches are made in CW's modern facilities... stamping, molding, machining, plating, and assembly. They are tested and retested in CW's laboratories to mechanical and electrical performance standards consistent with those described herein. CW maintains full control of all processes of conversion of raw material to finished product.

## TERMINAL OPTIONS

Five terminal styles are available as shown. Choose terminal that best suits your application from charts.

## PERFORMANCE STANDARDS ${ }^{+}$

CW switches are designed and manufactured to perform when subjected to the following conditions: Operating temperature $-104^{\circ} \mathrm{C}$ ambient maximum.

Relative humidity - After 100 hours in an atmosphere having $95 \%$ relative humidity and a temperature of $50^{\circ} \mathrm{C}$, switches will be operative and insulation resistance will be greater than 100 megohms between contacts and housing, if allowed to dry for a period of one hour at $25^{\circ} \mathrm{C}$ (room temperature).

Life cycling (no load) - Switches will be operative after 10,000 (minimum) cycles at the rate of 10 cycles per minute at rated load.
High-voltage breakdown - Minimum of 1000 volts rms 60 Hz for one minute between parts of opposite polarity.
Contact resistance - Less than 0.01 ohms at 20 mAdc.

[^0] for specifications for specific models. Specifications subject to change without notice.

## MATERIALS OF CONSTRUCTION ${ }^{+}$

Actuator - Type 6/6 black nylon, other colors available
Housing - Cold-rolled steel, plated
Housing plating - Panel: zinc, PC board: Electro-tin
Terminal board - N.E.M.A. Grade XP
Phenolic Laminate
Terminals - Copper, silver-plated
Moving contact - Copper alloys, silver-plated
Contact spring - Beryllium copper or phosphor bronze
${ }^{+}$Materials described herein are general specifications that vary depending on the switch construction specified and end application. Consult factory for specifications for specific models. Specifications subject to change without notice.

## ACCESSORIES

Toppers - Shown below is the "Topper" that can change your panel appearance and product styling. Fits onto button.
Hot Stamping - Functional or decorative marking of your choice can be imprinted on "Topper" surface with CW's "inhouse" facilities.
Colors - CW stores molding powders in many colors. "Toppers" and buttons are available in a variety of colors if your quantity is sufficient.

"Topper" Option G-02-373
(See button chart, page 4)

## CW PATENTS

CW Engineers are constantly trying to upgrade the quality and cost effectiveness of our switches. Often this results in new inventions. Switch products shown in this catalog may be covered by one or more of the following U.S. Patents:
3,270,149
3,993,881
3,271,535
4,404,437
$3,311,719 \quad 4,128,745 \quad 3,461,252$
4,410,232

Other patent applications are pending.
