Wave Soldering Profile For Thru-Hole Products (Pb-Free Components)

Notes:

Forward Current(mA)

Notes:
1. Recommend pre-heat temperature of 105°C or less (as measured with a thermocouple attached to the LED pins) prior to immersion in the solder wave with a maximum solder bath temperature of 260°C
2. Peak wave soldering temperature between 245°C ~ 255°C for 3 sec
(5 gas max)

- (5 sec max).
- (a) See final).
 (b) see final).
 (c) apply stress to the epoxy resin while the temperature is above 85°C.
 (c) Fixtures should not incur stress on the component when mounting and during soldering process.
 (c) Constraints of the stress of t

If special sorting is required (e.g. binning based on forward voltage,

luminous intensity / luminous flux, or wavelength),

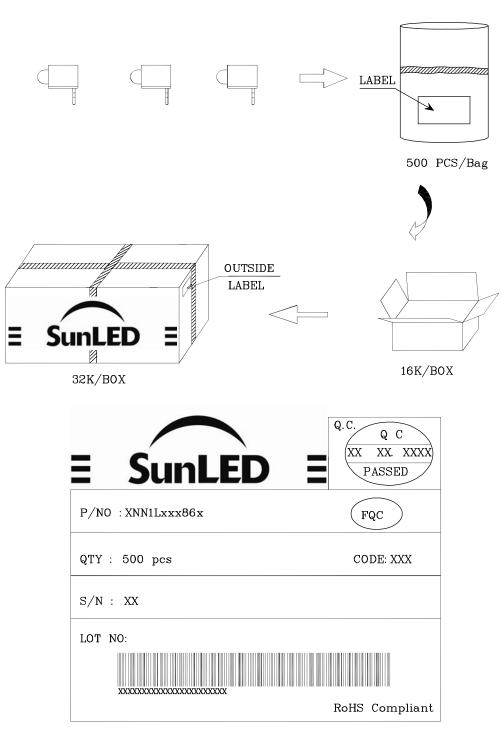

2. Luminous Intensity / Luminous Flux: +/-15%

the typical accuracy of the sorting process is as follows:

Note: Accuracy may depend on the sorting parameters.
