General Description

The HMC1087F10 is an 8W Gallium Nitride (GaN) MMIC Power Amplifier which operates between 2 and 20 GHz, and is provided in a 10-lead flange mount package. The amplifier typically provides 11 dB of small signal gain, +39 dBm of saturated output power, and +43 dBm output IP3 at +28 dBm output power per tone. The amplifier draws 850 mA quiescent current from a +28V DC supply. The RF I/Os are matched to 50 Ohms for ease of use.

Electrical Specifications. T_a = +25° C. V_{dd} = +28V. I_{dd} = 850 mA [1]

The circuit board used in the application should use RF circuit design techniques. Signal lines should have 50 Ohm impedance while the package ground leads and exposed paddle should be connected directly to the ground plane similar to that shown. A sufficient number of via holes should be used to connect the top and bottom ground planes. The evaluation circuit board shown is available from Hittite upon request.

[2] Circuit Board Material: Rogers 4350 or Arlon 25FR

[1] The universal evaluation board shown above is designed to support multiple products, please refer to Application Circuit herein for required external components.
