RP20-AW

20 Watt Single & Dual Output

Description

The RP20-AW series are ultraminiature wide input voltage range power DC/DC converters in a case half the size of industry standard 20W converters. Despite their small size, the RP20-AW converters are fully specified devices with output currents up to 4.5 Amps, up to 90% efficiency, no minimum load, 1600VDC isolation, a built-in Class A EMC filter and low ripple/noise figures. The outputs are also fully protected against short circuits, overcurrent and overvoltage. The no load input current is particularly low (only 4mA/6mA). The RP20-AW series will find many uses in applications where board space and/or board height is at a premium or in battery-powered systems where standby current is important.

 Note2: Test by minimum Vin and constant resistor load.

Model Numbering

Ordering Examples

- RP20-2405SAW/P = 24V 4:1 Input, 5V Output, Positive Logic CTRL pin and Trim pin fitted.
 RP20-483.3SAW-HC = 48V 4:1 Input, 3.3V Output, Premounted Heat-sink, no Trim or CTRL pins.
 (no trim pin available with dual output)

Notes:

- Note3: no suffix is standard part without trim pin and CTRL function fitted.
 add suffix "P" for CTRL function with positive logic (1=ON, 0=OFF), including trim pin
 add suffix "N" for CTRL function with negative logic (0=ON, 1=OFF), including trim pin
 Note4: add suffix -HC for premounted Heat-sink and clips

External Output Trimming

Output Voltage Trimming

Single output Powerline converters offer the feature of trimming the output voltage over a certain range around the nominal value by using external trim resistors. No general equation can be given for calculating the trim resistors, but the following trimtables give typical values for choosing these trimming resistors. If voltages between the given trim points are required, extrapolate between the two nearest given values to work out the resistor required or use a variable resistor to set the output voltage. Output can be externally trimmed by using the method shown below.
